Chapter I

Course Practice Environment: Security Credentials

For OS usernames and passwords, see the following:

- If you are attending a classroom-based or live virtual class, ask your instructor or LVC producer for OS credential information.
- If you are using a self-study format, refer to the communication that you received from Oracle University for this course.

For connection-specific credentials used in this course, see the following table:

Connection-Specific Credentials				
Connection_Name	Username	Password		
myconnection	ora1	oral (a)		
		transier		
		non-ti		
myconnection (gangl@bayli	has 2	10

C 1 10 (9				
10 -				

-transferable license **Practices for Lesson 1:** introdiction in the chapter of the c Introduction

Practices for Lesson 1: Overview

Practice Overview

In this practice, you start Oracle SQL Developer, create a new database connection, and browse your HR tables. You also set some SQL Developer preferences.

In some of the practices, there may be exercises that are prefaced with the phrases "If you have time" or "If you want an extra challenge." Work on these exercises only if you have completed all other exercises within the allocated time, and would like an additional challenge to your skills.

Perform the practices slowly and precisely. You can experiment with saving and running command files. If you have any questions at any time, ask your instructor.

Note

- All written practices use Oracle SQL Developer as the development environment.
 Although it is recommended that you use Oracle SQL Developer, you can also use SQL*Plus that is available in this course.
- For any query, the sequence of rows retrieved from the database may differ from the screenshots shown.

Practice 1-1: Introduction

Overview

This is the first of many practices in this course. The solutions (if you require them) can be found at the end of the practices for each lesson. The practices are intended to cover most of the topics that are presented in the corresponding lesson.

In this practice, you perform the following:

- Start Oracle SQL Developer and create a new connection to the oral account.
- Use Oracle SQL Developer to examine the data objects in the oral account. The oral account contains the HR schema tables.

Note the following location for the practice files:

/home/oracle/labs/sql1/labs

If you are asked to save any practice files, save them in the above location.

Tasks

- 1. Start Oracle SQL Developer by Using the SQL Developer Desktop Icon
- 2. Create a New Oracle SQL Developer Database Connection
 - a. To create a new database connection, in the Connections Navigator, right-click Connections and select New Connection from the context menu. The New / Select Database Connection dialog box appears.
 - b. Create a database connection by using the following information:

Connection Name: myconnection

Username: ora1

Password: Enter the password from the Course Practice Environment:

Security Credentials document

Hostname: localhost

Port: 1521

Service Name: PDBORCL

Ensure that you select the Save Password check box.

- 3. Test the Oracle SQL Developer Database Connection and Connect to the Database
 - Test the new connection.
 - b. If the status is Success, connect to the database by using this new connection.
- 4. Browse the Tables in the Connections Navigator
 - a. In the Connections Navigator, view the objects that are available to you in the Tables node. Verify that the following tables are present:

COUNTRIES
DEPARTMENTS
EMPLOYEES
JOB_GRADES
JOB_HISTORY
JOBS

LOCATIONS REGIONS

Copyright © 2016, Oracle and/or its affiliates. All rights reserved.

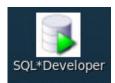

Practices for Lesson 1: Introduction

- b. Browse the structure of the EMPLOYEES table.
- c. View the data of the DEPARTMENTS table.

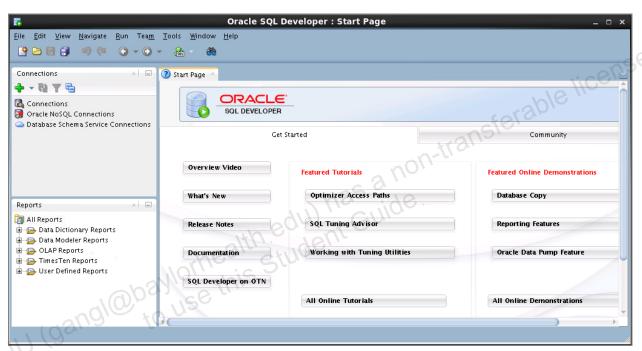

NG LIU (gangl@baylorhealth edu) has a non-transferable license this Student Guide.

Solution 1-1: Introduction

 Start Oracle SQL Developer by Using the SQL Developer Desktop Icon Double-click the SQL Developer desktop icon.

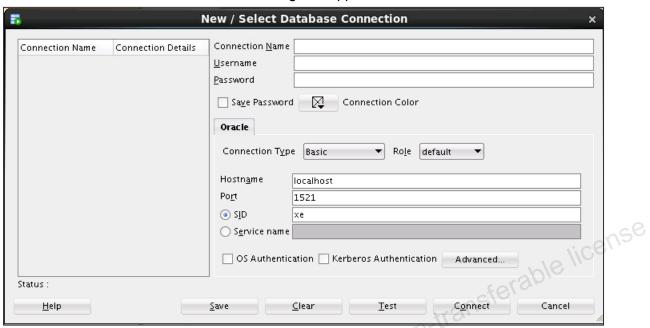

The SQL Developer interface appears.

- Create a New Oracle SQL Developer Database Connection
 - a. To create a new database connection, in the Connections Navigator, right-click Connections and select New Connection from the context menu.

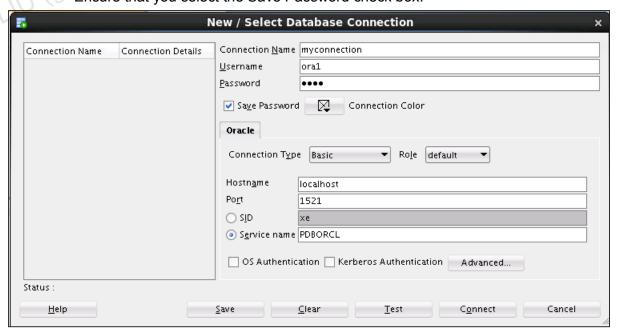

The New / Select Database Connection dialog box appears.

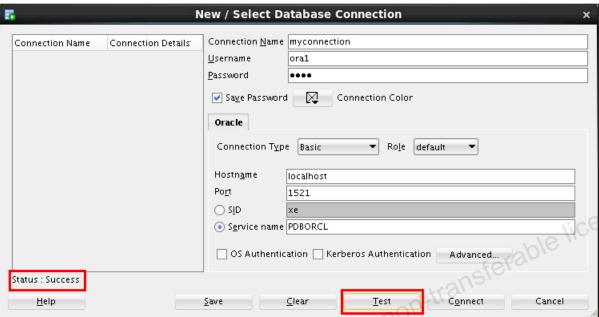

- b. Create a database connection by using the following information:
 - i. Connection Name: myconnection
 - ii. Username: ora1
 - iii. Password: Enter the password from the Course Practice Environment: Security Credentials document
 - iv. Hostname: localhost
 - v.Port: 1521
 - vi. Service Name: PDBORCL

Ensure that you select the Save Password check box.

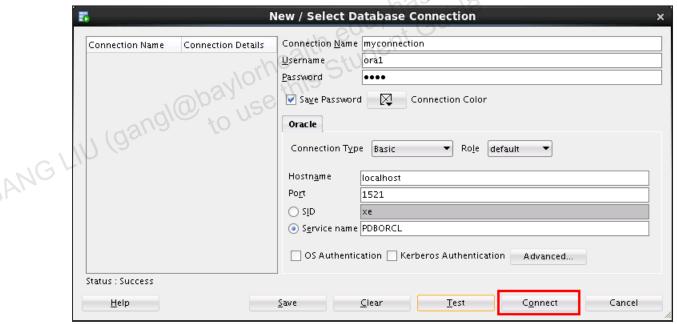

3. Test the Oracle SQL Developer Database Connection and Connect to the Database

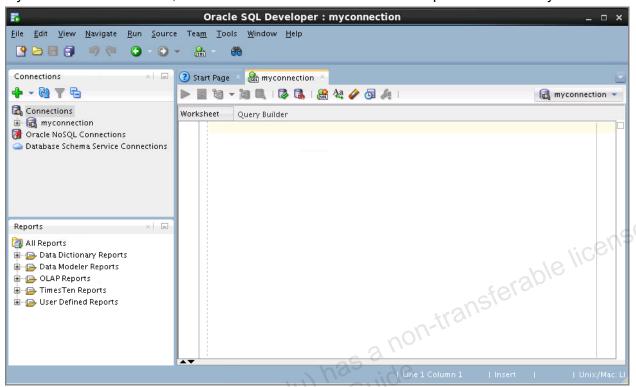

b. If the status is Success, connect to the database by using this new connection.

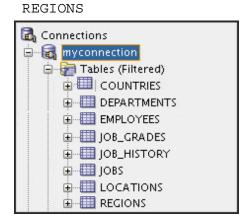

When you create a connection, a SQL Worksheet for that connection opens automatically.

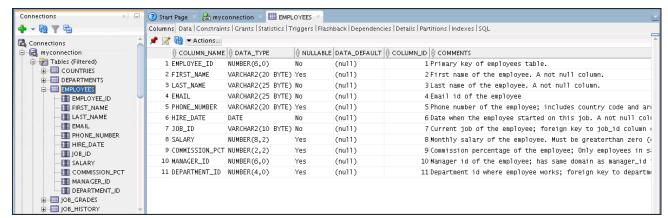

- Browse the Tables in the Connections Navigator
 - a. In the Connections Navigator, view the objects that are available to you in the Tables node. Verify that the following tables are present:

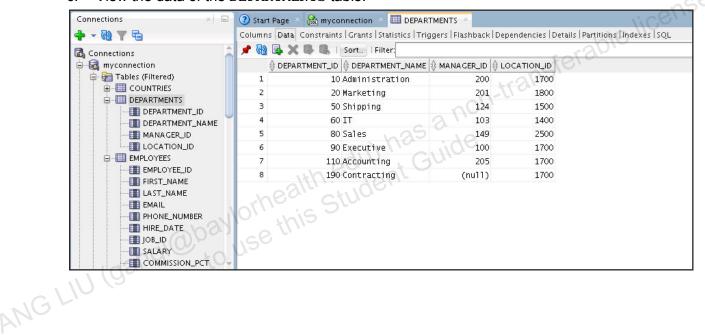

COUNTRIES
DEPARTMENTS
EMPLOYEES
JOB_GRADES
JOB_HISTORY
JOBS
LOCATIONS

b. Browse the structure of the EMPLOYEES table.

c. View the data of the DEPARTMENTS table.

NG LIU (gangl@baylorhealth edu) has a non-transferable license this Student Guide.

-transferable license **Practices for Lesson 2: Retrieving Data Using the SQL SELECT Statement** ANG LIU (gangl@baylorhealth!

Chapter 2

Practices for Lesson 2: Overview

Practice Overview

This practice covers the following topics:

- Selecting all data from different tables
- Describing the structure of tables
- Performing arithmetic calculations and specifying column names

Practice 2-1: Retrieving Data Using the SQL SELECT Statement

Overview

In this practice, you write simple SELECT queries. The queries cover most of the SELECT clauses and operations that you learned in this lesson.

Task 1

Test your knowledge:

The following SELECT statement executes successfully:

```
SELECT last name, job id, salary AS Sal
FROM
       employees;
```

True/False

The following SELECT statement executes successfully:

```
transferable license
SELECT *
FROM
      job grades;
```

True/False

There are four coding errors in the following statement. Can you identify them?

```
SELECT
          employee id, last name
          ANNUAL SALARY
sal x 12
FROM
          employees;
```

Task 2

Note the following points before you begin with the practices:

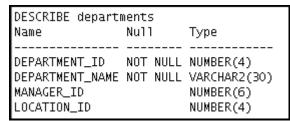

Save all your practice files at the following location:

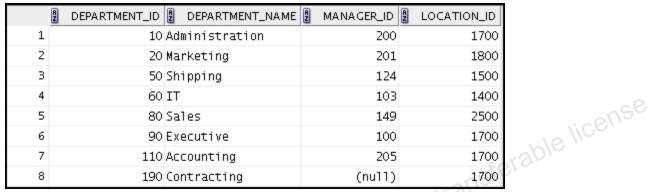

```
/home/oracle/labs/sql1/labs
```

- Enter your SQL statements in a SQL Worksheet. To open a new worksheet, click File menu, select New. A New Gallery dialog window appears. Click Database Files under Database Tier on the left pane. Select SQL File on the right pane and click OK.
- To save a script in SQL Developer, make sure that the required SQL Worksheet is active, and then from the File menu, select Save As to save your SQL statement as a lab <lessonno> <stepno>.sql script. When you modify an existing script, make sure that you use Save As to save it with a different file name.
- To run the query, click the Run Statement icon in the SQL Worksheet. Alternatively, you can press F9. For DML and DDL statements, use the Run Script icon or press F5.
- After you have executed the query, make sure that you do not enter your next query in the same worksheet. Open a new worksheet.

You have been hired as a SQL programmer for Acme Corporation. Your first task is to create some reports based on data from the Human Resources tables.

Your first task is to determine the structure of the DEPARTMENTS table and its contents.

- Your next task is to determine the structure of the EMPLOYEES table and its contents. 5.
 - Determine the structure of the EMPLOYEES table.

a.	Determine the	structure	of the EMPLOYEES table	S you
	DESCRIBE employ Name	/ees Null	Type du ha	Guide.
ANG LI	EMPLOYEE_ID FIRST_NAME LAST_NAME EMAIL PHONE_NUMBER HIRE_DATE JOB_ID SALARY COMMISSION_PCT MANAGER_ID DEPARTMENT_ID	NOT NULL NOT NULL	NUMBER(6) VARCHAR2(20) VARCHAR2(25) VARCHAR2(25) VARCHAR2(20) DATE VARCHAR2(10) NUMBER(8,2) NUMBER(2,2) NUMBER(6) NUMBER(4)	
				J

b. The HR department wants a query to display the last name, job ID, hire date, and employee ID for each employee, with the employee ID appearing first. Provide an alias STARTDATE for the HIRE_DATE column. Save your SQL statement to a file named lab_02_5b.sql so that you can dispatch this file to the HR department. Test your query in the lab_02_5b.sql file to ensure that it runs correctly.

Note: After you have executed the query, make sure that you do not enter your next query in the same worksheet. Open a new worksheet.

		E_ID 🖟 LAST_NAME	⊕ IOB_ID		1

GL	20 (90	206 Gietz	AC_ACCOUNT	07-JUN-10	

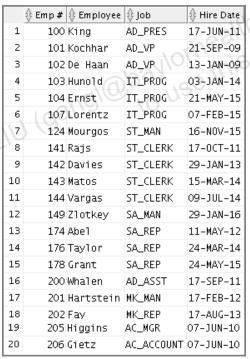

The HR department wants a query to display all unique job IDs from the EMPLOYEES table.

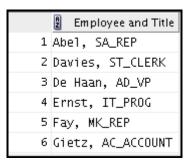

Task 3

If you have time, complete the following exercises:

transferable license The HR department wants more descriptive column headings for its report on employees. Copy the statement from lab 02 5b.sql to a new SQL Worksheet. Name the columns Emp #, Employee, Job, and Hire Date, respectively. Then run the query again.

8. The HR department has requested a report of all employees and their job IDs. Display the last name concatenated with the job ID (separated by a comma and space) and name the column Employee and Title.

...

19 Whalen, AD_ASST 20 Zlotkey, SA_MAN

If you want an extra challenge, complete the following exercise:

9. To familiarize yourself with the data in the EMPLOYEES table, create a query to display all the data from that table. Separate each column output by a comma. Name the column THE OUTPUT.

```
THE_OUTPUT

1 100, Steven, King, SKING, 515.123.4567, AD_PRES, ,17-JUN-11, 24000, ,90

2 101, Neena, Kochhar, NKOCHHAR, 515.123.4568, AD_VP, 100, 21-SEP-09, 17000, ,90

3 102, Lex, De Haan, LDEHAAN, 515.123.4569, AD_VP, 100, 13-JAN-09, 17000, ,90

4 103, Alexander, Hunold, AHUNOLD, 590.423.4567, IT_PROG, 102, 03-JAN-14, 9000, ,60

5 104, Bruce, Ernst, BERNST, 590.423.4568, IT_PROG, 103, 21-MAY-15, 6000, ,60

6 107, Diana, Lorentz, DLORENTZ, 590.423.5567, IT_PROG, 103, 07-FEB-15, 4200, ,60
```

...

```
18 202,Pat,Fay,PFAY,603.123.6666,MK_REP,201,17-AUG-13,6000,,20

19 205,Shelley,Higgins,SHIGGINS,515.123.8080,AC_MGR,101,07-JUN-10,12008,,110

20 206,William,Gietz,WGIETZ,515.123.8181,AC_ACCOUNT,205,07-JUN-10,8300,,80
```

Solution 2-1: Retrieving Data Using the SQL SELECT Statement

Task 1

Test your knowledge:

1. The following SELECT statement executes successfully:

```
SELECT last_name, job_id, salary AS Sal
FROM employees;
```

True/False

2. The following SELECT statement executes successfully:

```
SELECT *
FROM job_grades;
```

True/False

3. There are four coding errors in the following statement. Can you identify them?

```
SELECT employee_id, last_name
sal x 12 ANNUAL SALARY
FROM employees;
```

- The EMPLOYEES table does not contain a column called sal. The column is called SALARY.
- The multiplication operator is *, not x as shown in line 2.
- The ANNUAL SALARY alias cannot include spaces. The alias should read ANNUAL SALARY or should be enclosed within double quotation marks.
- A comma is missing after the LAST NAME column.

Task 2

You have been hired as a SQL programmer for Acme Corporation. Your first task is to create some reports based on data from the Human Resources tables.

- 4. Your first task is to determine the structure of the DEPARTMENTS table and its contents.
 - a. To determine the DEPARTMENTS table structure:

```
DESCRIBE departments
```

b. To view the data contained in the DEPARTMENTS table:

```
SELECT *
FROM departments;
```

- Your next task is to determine the structure of the EMPLOYEES table and its contents.
 - Determine the structure of the EMPLOYEES table.

```
DESCRIBE employees
```

The HR department wants a guery to display the last name, job ID, hire date, and employee ID for each employee, with the employee ID appearing first. Provide an alias STARTDATE for the HIRE DATE column. Save your SQL statement to a file named lab 02 5b.sql so that you can dispatch this file to the HR department. Test your query in the lab 02 5b.sql file to ensure that it runs correctly.

```
SELECT employee id, last name, job id, hire date StartDate
FROM
       employees;
```

The HR department wants a query to display all unique job IDs from the EMPLOYEES table. 6.

```
-transferable license
SELECT DISTINCT job id
      employees;
FROM
```

Task 3

If you have time, complete the following exercises:

The HR department wants more descriptive column headings for its report on employees. Copy the statement from lab 02 5b.sql to a new SQL Worksheet. Name the columns Emp #, Employee, Job, and Hire Date, respectively. Then run the query again.

```
SELECT employee id "Emp #", last name "Employee",
       job id "Job", hire date "Hire Date"
       employees;
FROM
```

The HR department has requested a report of all employees and their job IDs. Display the last name concatenated with the job ID (separated by a comma and space) and name the column Employee and Title.

```
SELECT last name | | ', ' | | job id "Employee and Title"
FROM
       employees;
```

If you want an extra challenge, complete the following exercise:

9. To familiarize yourself with the data in the EMPLOYEES table, create a guery to display all the data from that table. Separate each column output by a comma. Name the column THE OUTPUT.

```
SELECT employee id | | ',' | | first name | | ',' | | last name
       || ',' || email || ',' || phone number || ','|| job id
       || ',' || manager_id || ',' || hire_date || ','
       || salary || ',' || commission pct || ',' ||
department_id
       THE OUTPUT
FROM
       employees;
```

NG LIU (gangl@baylorhealth edu) has a non-transferable license this Student Guide.

-transferable license **Practices for Lesson 3:** ANG LIU (gangl@baylorhealth Studer 3) **Restricting and Sorting Data**

Practices for Lesson 3: Overview

Practices Overview

This practice covers the following topics:

- Selecting data and changing the order of the rows that are displayed
- Restricting rows by using the WHERE clause
- Sorting rows by using the ORDER BY clause
- Using substitution variables to add flexibility to your SQL SELECT statements

ANG LIU (gangl@baylorhealth edu) has a non-transferable license this Student

Practice 3-1: Restricting and Sorting Data

Overview

In this practice, you build reports by using statements with the WHERE clause and the ORDER BY clause. You make the SQL statements more reusable and generic by including the ampersand substitution.

Task

The HR department needs your assistance in creating some queries.

1. Because of budget issues, the HR department needs a report that displays the last name and salary of employees who earn more than \$12,000. Save your SQL statement as a file named lab 03 01.sql. Run your query.

	LAST_NAME	A	SALARY
1	King		24000
2	Kochhar		17000
3	De Haan		17000
4	Hartstein		13000
5	Higgins		12008

Open a new SQL Worksheet. Create a report that displays the last name and department edu) '' Guide number for employee number 176.

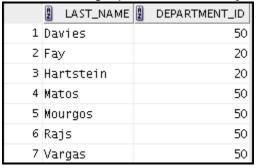

The HR department needs to find high-salaried and low-salaried employees. Modify lab 03 01.sql to display the last name and salary for any employee whose salary is not in the range \$5,000 through \$12,000. Save your SQL statement as lab 03 03.sql.

Create a report to display the last name, job ID, and hire date for employees with the last names of Matos and Taylor. Order the query in ascending order by hire date.

Display the last name and department ID of all employees in department 20 or department 50 in ascending alphabetical order by last name.

Modify lab 03 03.sql to display the last name and salary of employees who earn between \$5,000 and \$12,000, and are in department 20 or department 50. Label the columns Employee and Monthly Salary, respectively. Save lab 03 03.sql as lab 03 06.sql. Run the statement in lab 03 06.sql. n.edu) "Guide

The HR department needs a report that displays the last name and hire date of all employees who were hired in 2010.

Create a report to display the last name and job title of all employees who do not have a 8. manager.

Create a report to display the last name, salary, and commission of all employees who earn commissions. Sort the data in descending order of salary and commissions. Use the column's numeric position in the ORDER BY clause.

10. Members of the HR department want to have more flexibility with the gueries that you are writing. They would like a report that displays the last name and salary of employees who earn more than an amount that the user specifies after a prompt. Save this query to a file named lab 03 10.sql. (You can use the query created in Task 1 and modify it.) If you enter 12000 when prompted, the report displays the following results:

	LAST_NAME	A	SALARY
1	King		24000
2	Kochhar		17000
3	De Haan		17000
4	Hartstein		13000
5	Higgins		12008

11. The HR department wants to run reports based on a manager. Create a guery that prompts department for that manager's employees. The HR department wants the ability to sort the report on a selected column. You can test the data with the following with the user for a manager ID, and generates the employee ID, last name, salary, and transferable

manager id = 103, sorted by last name:

A	EMPLOYEE_ID	LAST_NAME	SALARY	DEPARTMENT_ID
1	104	Ernst	6000	60
2	107	Lorentz	4200	60

manager id = 201, sorted by salary:

A	EMPLOYEE_ID	LAST_NAME	SALARY 2	DEPARTMENT_ID
1	202	Fay\O	6000	20

manager id = 124, sorted by employee id:

				<u> </u>	
1	111	EMPLOYEE_ID	LAST_NAME	SALARY	DEPARTMENT_ID
	1	141	Rajs	3500	50
	2	142	Davies	3100	50
	3	143	Matos	2600	50
	4	144	Vargas	2500	50

If you have time, complete the following exercises:

12. Display the last names of all employees where the third letter of the name is "a."

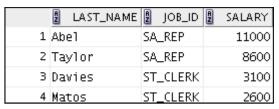

13. Display the last names of all employees who have both an "a" and an "e" in their last name.

If you want an extra challenge, complete the following exercises:

14. Display the last name, job, and salary for all employees whose jobs are either that of a sales representative or a stock clerk, and whose salaries are not equal to \$2,500, \$3,500, or \$7,000.

ANG LIU (gangl@baylorhealth.edu) has a non-transferable license this Student Guide. 15. Modify lab 03 06.sql to display the last name, salary, and commission for all

Solution 3-1: Restricting and Sorting Data

The HR department needs your assistance in creating some queries.

1. Because of budget issues, the HR department needs a report that displays the last name and salary of employees earning more than \$12,000. Save your SQL statement as a file named lab 03 01.sql. Run your query.

```
SELECT last_name, salary
FROM employees
WHERE salary > 12000;
```

2. Open a new SQL Worksheet. Create a report that displays the last name and department number for employee number 176.

```
SELECT last_name, department_id

FROM employees

WHERE employee_id = 176;
```

3. The HR department needs to find high-salaried and low-salaried employees. Modify lab_03_01.sql to display the last name and salary for all employees whose salary is not in the range \$5,000 through \$12,000. Save your SQL statement as lab 03 03.sql.

```
SELECT last_name, salary
FROM employees
WHERE salary NOT BETWEEN 5000 AND 12000;
```

4. Create a report to display the last name, job ID, and hire date for employees with the last names of Matos and Taylor. Order the query in ascending order by hire date.

```
SELECT last_name, job_id, hire_date
FROM employees
WHERE last_name IN ('Matos', 'Taylor')
ORDER BY hire_date;
```

5. Display the last name and department ID of all employees in department 20 or department 50 in ascending alphabetical order by last name.

```
SELECT last_name, department_id

FROM employees

WHERE department_id IN (20, 50)

ORDER BY last_name ASC;
```

6. Modify lab_03_03.sql to list the last name and salary of employees who earn between \$5,000 and \$12,000, and are in department 20 or department 50. Label the columns Employee and Monthly Salary, respectively. Save lab_03_03.sql as lab_03_06.sql. Run the statement in lab_03_06.sql.

```
SELECT last_name "Employee", salary "Monthly Salary"
FROM employees
WHERE salary BETWEEN 5000 AND 12000
AND department id IN (20, 50);
```

The HR department needs a report that displays the last name and hire date of all employees who were hired in 2010.

```
SELECT
         last name, hire date
FROM
         employees
         hire date >= '01-JAN-10' AND hire date < '01-JAN-11';
WHERE
```

Create a report to display the last name and job title of all employees who do not have a manager.

```
SELECT
         last name, job id
FROM
         employees
WHERE
         manager id IS NULL;
```

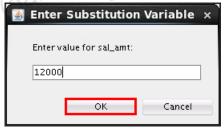

Create a report to display the last name, salary, and commission for all employees who earn commissions. Sort data in descending order of salary and commissions. Use the column's numeric position in the ORDER BY clause.

```
-transferable license
SELECT
         last name, salary, commission pct
FROM
         employees
WHERE
         commission pct IS NOT NULL
ORDER BY 2 DESC, 3 DESC;
```

10. Members of the HR department want to have more flexibility with the gueries that you are writing. They would like a report that displays the last name and salary of employees who earn more than an amount that the user specifies after a prompt. (You can use the query created in Task 1 and modify it.) Save this query to a file named lab 03 10.sql.

```
last name, salary
SELECT
FROM
        employees
WHERE
        salary > &sal amt;
```

Enter 12000 when prompted for a value in a dialog box. Click OK.

11. The HR department wants to run reports based on a manager. Create a query that prompts the user for a manager ID, and generates the employee ID, last name, salary, and department for that manager's employees. The HR department wants the ability to sort the report on a selected column. You can test the data with the following values:

```
manager id = 103, sorted by last name
manager_id = 201, sorted by salary
manager_id = 124, sorted by employee_id
```

```
SELECT employee id, last name, salary, department id
FROM employees
WHERE manager id = &mgr num
ORDER BY &order col;
```

If you have the time, complete the following exercises:

12. Display the last names of all employees where the third letter of the name is "a."

```
SELECT last_name
FROM employees
WHERE last_name LIKE '__a%';
```

13. Display the last names of all employees who have both an "a" and an "e" in their last name.

```
SELECT last_name

FROM employees

WHERE last_name LIKE '%a%'

AND last_name LIKE '%e%';
```

If you want an extra challenge, complete the following exercises:

14. Display the last name, job, and salary for all employees whose job is that of a sales representative or a stock clerk, and whose salary is not equal to \$2,500, \$3,500, or \$7,000.

```
SELECT last_name, job_id, salary
FROM employees
WHERE job_id IN ('SA_REP', 'ST_CLERK')
AND salary NOT IN (2500, 3500, 7000);
```

15. Modify lab_03_06.sql to display the last name, salary, and commission for all employees whose commission amount is 20%. Save lab_03_06.sql as lab 03 15.sql. Rerun the statement in lab 03 15.sql.

```
SELECT last_name "Employee", salary "Monthly Salary",
commission_pct
FROM employees
WHERE commission_pct = .20;
```

Chapter 4

Practices for Lesson 4: Overview

Practice Overview

This practice covers the following topics:

- Writing a query that displays the system date
- Creating queries that require the use of numeric, character, and date functions
- Performing calculations of years and months of service for an employee

Practice 4-1: Using Single-Row Functions to Customize Output

Overview

In this practice, you use the different functions that are available for character, number, and date data types. Remember that for nested functions, the results are evaluated from the innermost function to the outermost function.

Tasks

Write a query to display the system date. Label the column Date.

Note: If your database is remotely located in a different time zone, the output will be the date for the operating system on which the database resides.

- The HR department needs a report to display the employee number, last name, salary, and salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased by 15.5% (expressed as a whole number) for each amount of the salary increased as a whole number of the salar column New Salary. Save your SQL statement in a file named lab 04 02.sql.
- Run your query in the lab 04 02.sql file.

		EMPLOYEE_ID	LAST_NAME	2 SALARY	2 New Salary
	1	100	King	24000	27720
	2	101	Kochhar	17000	19635
	3	102	De Haan	17000	19635
	4	103	Huno1d	9000	10395

19	205	Higgins	12008	13869	1861	
20	206	Gietz	8300	9587	1287	

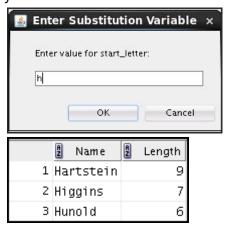

- 5. Perform the following tasks:
 - a. Write a query that displays the last name (with the first letter in uppercase and all the other letters in lowercase) and the length of the last name for all employees whose name starts with the letters "A," or "M." Give each column an appropriate label. Sort the results by the employees' last names.

b. Rewrite the query so that the user is prompted to enter the letter that the last name starts with. For example, if the user enters "H" (capitalized) when prompted for a letter, the output should show all employees whose last name starts with the letter "H."

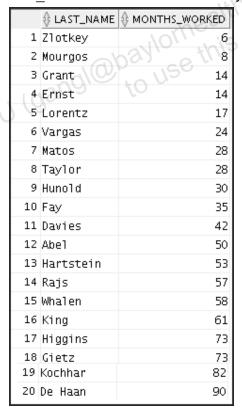

Modify the guery such that the case of the letter that is entered does not affect the output. The entered letter must be capitalized before being processed by the SELECT query.

If you have time, complete the following exercises:

ole license 6. The HR department wants to find the duration of employment for each employee. For each employee, display the last name and calculate the number of months between today and the date on which the employee was hired. Label the column as MONTHS WORKED. Order your results by the number of months employed. The number of months must be rounded to the closest whole number.

Note: Because this guery depends on the date when it was executed, the values in the MONTHS WORKED column will differ for you.

7. Create a query to display the last name and salary for all employees. Format the salary to be 15 characters long, left-padded with the \$ symbol. Label the column SALARY.

	LAST_NAM 1 King 2 Kochhar 3 De Haan 4 Hunold 5 Ernst 6 Lorentz 7 Mourgos 8 Rajs 9 Davies 10 Matos 11 Vargas 12 Zlotkey 13 Abel 14 Taylor 15 Grant 16 Whalen	\$\$\$\$\$\$\$\$\$\$\$24000 \$\$\$\$\$\$\$\$\$\$\$\$17000 \$\$\$\$\$\$\$\$\$\$\$\$\$17000 \$\$\$\$\$\$\$\$\$\$	as a non-transferable license

20	Vargas	******** ****** ***** ***** **** ****

Create a query to display the last name and the number of weeks employed for all
employees in department 90. Label the number of weeks column as TENURE. Truncate the
number of weeks value to 0 decimal places. Show the records in descending order of the
employee's tenure.

Note: The TENURE value will differ because it depends on the date on which you run the query.

		⊕ TENURE
1	De Haan	391
2	Kochhar	355
3	King	264

Solution 4-1: Using Single-Row Functions to Customize Output

1. Write a query to display the system date. Label the column Date.

Note: If your database is remotely located in a different time zone, the output will be the date for the operating system on which the database resides.

```
SELECT sysdate "Date"
FROM dual;
```

2. The HR department needs a report to display the employee number, last name, salary, and salary increased by 15.5% (expressed as a whole number) for each employee. Label the column New Salary. Save your SQL statement in a file named lab_04_02.sql.

```
SELECT employee_id, last_name, salary,
ROUND(salary * 1.155, 0) "New Salary"
FROM employees;
```

3. Run your query in the file lab 04 02.sql.

```
SELECT employee_id, last_name, salary,
ROUND(salary * 1.155, 0) "New Salary"
FROM employees;
```

4. Modify your query in lab_04_02.sql to add a column that subtracts the old salary from the new salary. Label the column Increase. Save the contents of the file as lab 04 04.sql. Run the revised query.

```
SELECT employee_id, last_name, salary,

ROUND(salary * 1.155, 0) "New Salary",

ROUND(salary * 1.155, 0) - salary "Increase"

FROM employees;
```

- 5. Perform the following tasks:
 - a. Write a query that displays the last name (with the first letter in uppercase and all the other letters in lowercase) and the length of the last name for all employees whose name starts with the letters "A," or "M." Give each column an appropriate label. Sort the results by the employees' last names.

```
SELECT INITCAP(last_name) "Name",
LENGTH(last_name) "Length"

FROM employees

WHERE last_name LIKE 'M%'
OR last_name LIKE 'A%'

ORDER BY last_name;
```

b. Rewrite the guery so that the user is prompted to enter the letter that starts the last name. For example, if the user enters H (capitalized) when prompted for a letter, the output should show all employees whose last names start with the letter "H."

```
INITCAP(last name) "Name",
SELECT
        LENGTH(last name) "Length"
FROM
        employees
WHERE
        last name LIKE '&start letter%'
ORDER BY last name;
```

Modify the guery such that the case of the letter that is entered does not affect the output. The entered letter must be capitalized before being processed by the SELECT query.

```
SELECT
        INITCAP(last name)
                                               ransferable license
LENGTH(last name) "Length"
        employees
FROM
        last name LIKE UPPER('&start letter%' )
WHERE
ORDER BY last name;
```

If you have time, complete the following exercises:

6. The HR department wants to find the duration of employment for each employee. For each employee, display the last name and calculate the number of months between today and the date on which the employee was hired. Label the column MONTHS WORKED. Order your results by the number of months employed. The number of months must be rounded to the closest whole number.

Note: Because this guery depends on the date when it was executed, the values in the MONTHS WORKED column will differ for you.

```
SELECT last name, ROUND (MONTHS BETWEEN (
       SYSDATE, hire date)) MONTHS WORKED
FROM
       employees
ORDER BY months worked;
```

7. Create a query to display the last name and salary for all employees. Format the salary to be 15 characters long, left-padded with the \$ symbol. Label the column SALARY.

```
SELECT last name,
       LPAD(salary, 15, '$') SALARY
FROM
       employees;
```

8. Create a query that displays employees' last names, and indicates the amounts of their salaries with asterisks. Each asterisk signifies a thousand dollars. Sort the data in descending order of salary. Label the column SALARIES IN ASTERISK.

```
SELECT last name,
       rpad(' ', (salary/1000)+1, '*')
               SALARIES IN ASTERISK
      employees
FROM
ORDER BY salary DESC;
```

9. Create a query to display the last name and the number of weeks employed for all employees in department 90. Label the number of weeks column as TENURE. Truncate the number of weeks value to 0 decimal places. Show the records in descending order of the employee's tenure.

Note: The TENURE value will differ because it depends on the date when you run the query.

ANG LIU (gangl@baylorhealth edu) has a non-transferable license this Student Guide.

```
SELECT last_name, trunc((SYSDATE-hire_date)/7) AS TENURE
FROM employees
WHERE department_id = 90
ORDER BY TENURE DESC;
```

Chapter 5

Practices for Lesson 5: Overview

Practice Overview

This practice covers the following topics:

- Creating queries that use the TO_CHAR and TO_DATE functions
- Creating queries that use conditional expressions such as CASE, searched CASE, and DECODE

Practice 5-1: Using Conversion Functions and Conditional Expressions

Overview

In this practice, you use the <code>TO_CHAR</code> and <code>TO_DATE</code> functions, and conditional expressions such as <code>CASE</code>, searched <code>CASE</code>, and <code>DECODE</code>.

Tasks

ANG LIU (9

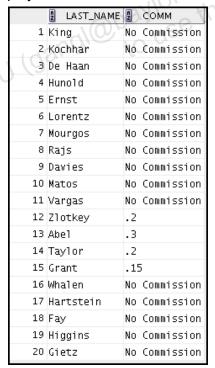

Create a report that produces the following for each employee:
 <employee last name> earns <salary> monthly but wants <3 times salary.>. Label
the column Dream Salaries.

	∯ Dream Salaries
1	Wing earns \$24,000.00 monthly but wants \$72,000.00. Kochhar earns \$17,000.00 monthly but wants \$51,000.00. De Haan earns \$17,000.00 monthly but wants \$51,000.00. Hunold earns \$9,000.00 monthly but wants \$27,000.00. Ernst earns \$6,000.00 monthly but wants \$18,000.00. Lorentz earns \$4,200.00 monthly but wants \$12,600.00.
_	Kochhar earns \$17,000.00 monthly but wants \$51,000.00.
_	De Haan earns \$17,000.00 monthly but wants \$51,000.00.
	Hunold cames \$0,000.00 monthly but wants \$37,000.00.
	Hunold earns \$9,000.00 monthly but wants \$27,000.00.
_	Ernst earns \$6,000.00 monthly but wants \$18,000.00.
_	
7	Mourgos earns \$5,800.00 monthly but wants \$17,400.00.
8	Rajs earns \$3,500.00 monthly but wants \$10,500.00.
9	Davies earns \$3,100.00 monthly but wants \$9,300.00.
10	Matos earns \$2,600.00 monthly but wants \$7,800.00.
11	Vargas earns \$2,500.00 monthly but wants \$7,500.00.
12	Zlotkey earns \$10,500.00 monthly but wants \$31,500.00.
13	Abel earns \$11,000.00 monthly but wants \$33,000.00.
14	Taylor earns \$8,600.00 monthly but wants \$25,800.00.
15	Grant earns \$7,000.00 monthly but wants \$21,000.00.
16	Whalen earns \$4,400.00 monthly but wants \$13,200.00.
17	Hartstein earns \$13,000.00 monthly but wants \$39,000.00.
18	Fay earns \$6,000.00 monthly but wants \$18,000.00.
19	Higgins earns \$12,008.00 monthly but wants \$36,024.00.
20	Gietz earns \$8,300.00 monthly but wants \$24,900.00.

2. Display each employee's last name, hire date, and salary review date, which is the first Monday after six months of service. Label the column REVIEW. Format the dates to appear in a format that is similar to "Monday, the Thirty-First of July, 2000."

	LAST_NAME	⊕ HIRE_DATE		
1	King	17-JUN-11	Monday,	the Nineteenth of December, 2011
2	Kochhar	21-SEP-09	Monday,	the Twenty-Second of March, 2010
3	De Haan	13-JAN-09	Monday,	the Twentieth of July, 2009
4	Huno1d	03-JAN-14	Monday,	the Seventh of July, 2014
5	Ernst	21-MAY-15	Monday,	the Twenty-Third of November, 2015
6	Lorentz	07-FEB-15	Monday,	the Tenth of August, 2015
7	Mourgos	16-N0V-15	Monday,	the Twenty-Third of May, 2016
8	Rajs	17-0CT-11	Monday,	the Twenty-Third of April, 2012
9	Davies	29-JAN-13	Monday,	the Fifth of August, 2013
10	Matos	15-MAR-14	Monday,	the Twenty-Second of September, 201
11	Vargas	09-JUL-14	Monday,	the Twelfth of January, 2015
12	Zlotkey	29-JAN-16	Monday,	the First of August, 2016
13	Abel	11-MAY-12	Monday,	the Twelfth of November, 2012
14	Taylor	24-MAR-14	Monday,	the Twenty-Ninth of September, 2014
15	Grant	24-MAY-15	Monday,	the Thirtieth of November, 2015
16	Whalen	17-SEP-11	Monday,	the Nineteenth of March, 2012
17	Hartstein	17-FEB-12	Monday,	the Twentieth of August, 2012
18	Fay	17-AUG-13	Monday,	the Twenty-Fourth of February, 2014
19	Higgins	07-JUN-10	Monday,	the Thirteenth of December, 2010
20	Gietz	07-JUN-10	Monday,	the Thirteenth of December, 2010

3. Create a query that displays employees' last names and commission amounts. If an employee does not earn commission, show "No Commission." Label the column COMM.

4. Using the CASE function, write a query that displays the grade of all employees based on the value of the JOB_ID column, using the following data:

Job	Grade
AD_PRES	A
ST_MAN	В
IT_PROG	C
SA_REP	D
ST_CLERK	E
None of the abov	<i>r</i> e 0

5. Rewrite the statement in the preceding exercise by using the searched CASE syntax.

B JOB_ID B GRADE 1 AC_ACCOUNT 0 2 AC_MGR 0 3 AD_ASST 0 4 AD_PRES A 5 AD_VP 0 6 AD_VP 0 7 IT_PROG C 9 IT_PROG C 10 MK_MAN 0 11 MK_REP 0 12 SA_MAN 0 13 SA_REP D 14 SA_REP D 16 ST_CLERK E 19 ST_CLERK E 19 ST_CLERK E 20 ST_MAN B			, p. 000 ug	normal and the second of the s

Solution 5-1: Using Conversion Functions and Conditional Expressions

Create a report that produces the following for each employee:
 <employee last name> earns <salary> monthly but wants <3 times salary.>. Label
 the column Dream Salaries.

2. Display each employee's last name, hire date, and salary review date, which is the first Monday after six months of service. Label the column REVIEW. Format the dates to appear in a format that is similar to "Monday, the Thirty-First of July, 2000."

```
SELECT last_name, hire_date,
    TO_CHAR(NEXT_DAY(ADD_MONTHS(hire_date, 6),'MONDAY'),
    'fmDay, "the" Ddspth "of" Month, YYYY') REVIEW
FROM employees;
```

3. Create a query that displays employees' last names and commission amounts. If an employee does not earn commission, show "No Commission." Label the column COMM.

4. Using the CASE function, write a query that displays the grade of all employees based on the value of the JOB ID column, using the following data:

Job (Grad
AD_PRES	A
ST_MAN	В
IT_PROG	С
SA_REP	D
ST_CLERK	E
None of the above	0

```
SELECT job_id, CASE job_id
                WHEN 'ST CLERK' THEN 'E'
                WHEN 'SA REP'
                                 THEN 'D'
                WHEN 'IT PROG'
                                 THEN 'C'
                WHEN 'ST MAN'
                                 THEN
                                      'B'
                     'AD PRES'
                                 THEN 'A'
                WHEN
                ELSE
                     '0'
                          END
                                GRADE
FROM employees;
```

5. Rewrite the statement in the preceding exercise by using the searched CASE syntax.

```
SELECT job id,
               CASE
               WHEN job_id = 'ST_CLERK'
                                         THEN 'E'
                                              transferable license.
               WHEN job id = 'SA REP'
                                         THEN
                                              'D'
               WHEN job id = 'IT PROG'
                                         THEN
               WHEN job id = 'ST MAN'
                                         THEN
               WHEN job_id = 'AD PRES'
                                         THEN
               ELSE '0'
                         END
                               GRADE
FROM employees;
```

6. Rewrite the statement in the preceding exercise by using the DECODE syntax.

```
SELECT job_id, decode (job_id,

'ST_CLERK', 'E',

'SA_REP', 'D',

'IT_PROG', 'C',

'ST_MAN', 'B',

'AD_PRES', 'A',

'0')GRADE

FROM employees;
```

Chapter 6

Practices for Lesson 6: Overview

Practice Overview

This practice covers the following topics:

- Writing queries that use group functions
- Grouping by rows to achieve multiple results
- Restricting groups by using the HAVING clause

Practice 6-1: Reporting Aggregated Data by Using Group Functions

Overview

In this practice, you use group functions and select groups of data.

Tasks

Determine the validity of the following statements. Circle either True or False.

- Group functions work across many rows to produce one result per group. True/False
- 2. Group functions include nulls in calculations. True/False
- 3. The WHERE clause restricts rows before inclusion in a group calculation. True/False

The HR department needs the following reports:

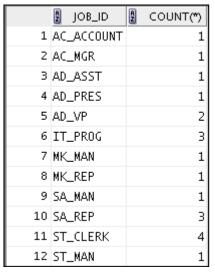

4. Find the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number. Save your SQL statement as lab_06_04.sql. Run the query.

5. Modify the query in lab_06_04.sql to display the minimum, maximum, sum, and average salary for each job type. Save lab_06_04.sql as lab_06_05.sql. Run the statement in lab_06_05.sql.

		∄ JOB_ID	Maximum	Minimum	2 Sum	Average
	1	IT_PROG	9000	4200	19200	6400
	2	AC_MGR	12008	12008	12008	12008
	(03	AC_ACCOUNT	8300	8300	8300	8300
~ 1 <i>I</i> V	4	ST_MAN	5800	5800	5800	5800
ANG LIU	5	AD_ASST	4400	4400	4400	4400
	6	AD_VP	17000	17000	34000	17000
	7	SA_MAN	10500	10500	10500	10500
	8	MK_MAN	13000	13000	13000	13000
	9	AD_PRES	24000	24000	24000	24000
	10	SA_REP	11000	7000	26600	8867
	11	MK_REP	6000	6000	6000	6000
	12	ST_CLERK	3500	2500	11700	2925

6. Write a query to display the number of people with the same job.

Generalize the query so that a user in the HR department is prompted for a job title. Save the script to a file named lab_06_06.sql. Run the query. Enter IT_PROG when prompted.

7. Determine the number of managers without listing them. Label the column Number of Managers.

Hint: Use the MANAGER ID column to determine the number of managers.

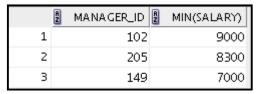

8. Find the difference between the highest and lowest salaries. Label the column DIFFERENCE.

If you have time, complete the following exercises:

9. Create a report to display the manager number and the salary of the lowest-paid employee for that manager. Exclude anyone whose manager is not known. Exclude any groups where the minimum salary is \$6,000 or less. Sort the output in descending order of salary.

If you want an extra challenge, complete the following exercises:

10. Create a query to display the total number of employees and, of that total, the number of employees hired in 2009, 2010, 2011, and 2012. Create appropriate column headings.

	⊕ TOTAL	∲ 2009	010 ∲	∯ 2011	012 ∯
1	20	2	2	3	2

11. Create a matrix query to display the job, the salary for that job based on the department numbers 20, 50, 80, and 90, and the total salary for that job. Ensure to give each column an appropriate heading.

								<u> </u>

Solution 6-1: Reporting Aggregated Data by Using Group Functions

Determine the validity of the following statements. Circle either True or False.

- Group functions work across many rows to produce one result per group.
 True/False
- 2. Group functions include nulls in calculations.

True/**False**

3. The WHERE clause restricts rows before inclusion in a group calculation.

True/False

The HR department needs the following reports:

4. Find the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number. Save your SQL statement as lab 06 04.sql. Run the query.

```
SELECT ROUND(MAX(salary),0) "Maximum",
ROUND(MIN(salary),0) "Minimum",
ROUND(SUM(salary),0) "Sum",
ROUND(AVG(salary),0) "Average"
FROM employees;
```

5. Modify the query in lab_06_04.sql to display the minimum, maximum, sum, and average salary for each job type. Save lab_06_04.sql as lab_06_05.sql. Run the statement in lab_06_05.sql.

6. Write a query to display the number of people with the same job.

```
SELECT job_id, COUNT(*)
FROM employees
GROUP BY job_id;
```

Generalize the query so that a user in the HR department is prompted for a job title. Save the script to a file named lab_06_06.sql. Run the query. Enter IT_PROG when prompted and click OK.

```
SELECT job_id, COUNT(*)
FROM employees
WHERE job_id = '&job_title'
GROUP BY job_id;
```

7. Determine the number of managers without listing them. Label the column Number of Managers.

Hint: Use the MANAGER ID column to determine the number of managers.

```
SELECT COUNT(DISTINCT manager_id) "Number of Managers" FROM employees;
```

8. Find the difference between the highest and lowest salaries. Label the column DIFFERENCE.

```
SELECT MAX(salary) - MIN(salary) DIFFERENCE employees;
```

If you have time, complete the following exercises:

9. Create a report to display the manager number and the salary of the lowest-paid employee for that manager. Exclude anyone whose manager is not known. Exclude any groups where the minimum salary is \$6,000 or less. Sort the output in descending order of salary.

```
SELECT manager_id, MIN(salary)
FROM employees
WHERE manager_id IS NOT NULL
GROUP BY manager_id
HAVING MIN(salary) > 6000
ORDER BY MIN(salary) DESC;
```

If you want an extra challenge, complete the following exercises:

10. Create a query that displays the total number of employees and, of that total, the number of employees hired in 2009, 2010, 2011, and 2012. Create appropriate column headings.

11. Create a matrix query to display the job, the salary for that job based on the department numbers 20, 50, 80, and 90, and the total salary for that job. Ensure to give each column an appropriate heading.

```
SELECT job_id "Job",

SUM(DECODE(department_id , 20, salary)) "Dept 20",

SUM(DECODE(department_id , 50, salary)) "Dept 50",

SUM(DECODE(department_id , 80, salary)) "Dept 80",

SUM(DECODE(department_id , 90, salary)) "Dept 90",

SUM(salary) "Total"

FROM employees

GROUP BY job_id;
```

Practice 7-1: Displaying Data from Multiple Tables by Using Joins

Overview

In this practice, you extract data from multiple tables using SQL:1999–compliant joins.

Tasks

1. Write a query for the HR department to produce the addresses of all the departments. Use the LOCATIONS and COUNTRIES tables. Show the location ID, street address, city, state or province, and country in the output. Use a NATURAL JOIN to produce the results.

∯ LC	ocation_id \$ street_address	∯ CITY		NCE & COUNTRY_NAME
1	1400 2014 Jabberwocky Rd	South1ake	Texas	United States of America
2	1500 2011 Interiors Blvd	South San Fran	cisco California	United States of America
3	1700 2012 Charade Rd	Seattle	Washington	United States of America
4	1800 460 Bloor St. W.	Toronto	Ontario	Canada
5	2500 Magdalen Centre, The Oxford Scienc	e Park Oxford	Oxford	United Kingdom

3. The HR department needs a report of employees in Toronto. Display the last name, job, department number, and the department name for all employees who work in Toronto.

4. Create a report to display employees' last names and employee numbers along with their managers' last names and manager numbers. Label the columns Employee, Emp#, Manager, and Mgr#, respectively. Save your SQL statement as lab_07_04.sql. Run the query.

,	# Employee	-	∯ Manager Do Unam	∯ Mgr#
_	Huno1d		De Haan	102
	Fay		Hartstein	
	Gietz		Higgins	205
4	Ernst	104	Huno1d	103

6	Vargas	09-JUL-14
7	Zlotkey	29-JAN-16
8	Taylor	24-MAR-14
9	Grant	24-MAY-15
10	Fay	17-AUG-13

9. The HR department needs to find the names and hire dates of all employees who were hired before their managers, along with their managers' names and hire dates. Save the script to a file named lab_07_09.sql.

Solution 7-1: Displaying Data from Multiple Tables by Using Joins

1. Write a query for the HR department to produce the addresses of all the departments. Use the LOCATIONS and COUNTRIES tables. Show the location ID, street address, city, state or province, and country in the output. Use a NATURAL JOIN to produce the results.

```
SELECT location_id, street_address, city, state_province, country_name
FROM locations
NATURAL JOIN countries;
```

2. The HR department needs a report of all employees with corresponding departments. Write a query to display the last name, department number, and department name for these employees.

```
SELECT last_name, department_id, department_name
FROM employees
JOIN departments
USING (department_id);
```

3. The HR department needs a report of employees in Toronto. Display the last name, job, department number, and department name for all employees who work in Toronto.

```
SELECT e.last_name, e.job_id, e.department_id, d.department_name
FROM employees e JOIN departments d
ON (e.department_id = d.department_id)
JOIN locations l
USING (location_id)
WHERE LOWER(l.city) = 'toronto';
```

4. Create a report to display employees' last names and employee numbers along with their managers' last names and manager numbers. Label the columns Employee, Emp#, Manager, and Mgr#, respectively. Save your SQL statement as lab_07_04.sql. Run the query.

5. Modify lab_07_04.sql to display all employees, including King, who has no manager. Order the results by employee number. Save your SQL statement as lab_07_05.sql. Run the query in lab_07_05.sql.

6. Create a report for the HR department that displays employee last names, department numbers, and all employees who work in the same department as a given employee. Give each column an appropriate label. Save the script to a file named lab_07_06.sql. Run the guery.

7. The HR department needs a report on job grades and salaries. To familiarize yourself with the JOB_GRADES table, first show the structure of the JOB_GRADES table. Then create a query that displays the name, job, department name, salary, and grade for all employees.

If you want an extra challenge, complete the following exercises:

8. The HR department wants to determine the names of all employees who were hired after Davies. Create a query to display the name and hire date of any employee hired after employee Davies.

```
SELECT e.last_name, e.hire_date
FROM employees e JOIN employees davies
ON (davies.last_name = 'Davies')
WHERE davies.hire_date < e.hire_date;</pre>
```

9. The HR department needs to find the names and hire dates of all employees who were hired before their managers, along with their managers' names and hire dates. Save the script to a file named lab 07 09.sql.

```
SELECT w.last_name, w.hire_date, m.last_name MANAGER,
m.hire_date "Manager_hire_date"
FROM employees w JOIN employees m
ON (w.manager_id = m.employee_id)
WHERE w.hire_date < m.hire_date;</pre>
```

-transferable license **Practices for Lesson 8: Using** ANG LIU (gangl@baylorhealth Students) Subqueries to Solve Queries

Practices for Lesson 8: Overview

Practice Overview

This practice covers the following topics:

- Creating subqueries to query values based on unknown criteria
- Using subqueries to find values that exist in one set of data and not in another

Practice 8-1: Using Subqueries to Solve Queries

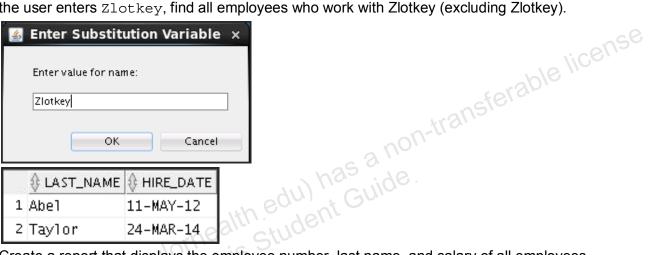

Overview

In this practice, you write complex queries using nested SELECT statements.

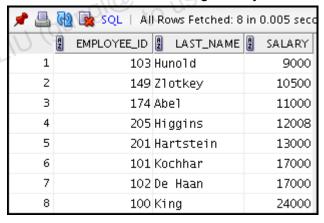

For practice questions, you may want to create the inner query first. Make sure that it runs and produces the data that you anticipate before you code the outer query.

Tasks

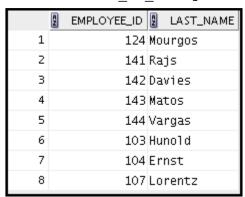

The HR department needs a query that prompts the user for an employee's last name. The query then displays the last name and hire date of any employee in the same department as the employee whose name the user supplies (excluding that employee). For example, if the user enters <code>Zlotkey</code>, find all employees who work with Zlotkey (excluding Zlotkey).

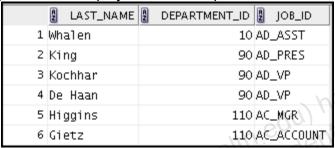

tudent Guide Create a report that displays the employee number, last name, and salary of all employees who earn more than the average salary. Sort the results in ascending order by salary.

Write a query that displays the employee number and last name of all employees who work in a department with any employee whose last name contains the letter "u." Save your SQL statement as lab 08 03.sql. Run your query.

The HR department needs a report that displays the last name, department number, and job ID of all employees whose department location ID is 1700. as a non-transferable

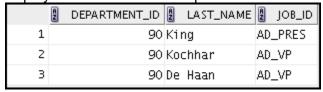

Modify the query so that the user is prompted for a location ID. Save this to a file named lab 08 04.sql.

Create a report for HR that displays the last name and salary of every employee who reports to King.

111	LAST_NAME	2 SALARY
1	Kochhar	17000
2	De Haan	17000
3	Mourgos	5800
4	Zlotkey	10500
5	Hartstein	13000

Create a report for HR that displays the department number, last name, and job ID for every employee in the Executive department.

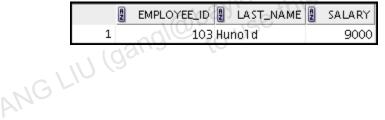

Create a report that displays a list of all employees whose salary is more than the salary of any employee from department 60.

If you have time, complete the following exercise:

a non-transferable license Modify the query in lab 08 03.sql to display the employee number, last name, and salary of all employees who earn more than the average salary, and who work in a department with any employee whose last name contains the letter "u." Save lab 08 03.sql as lab 08 08.sql again. Run the statement in lab 08 08.sql.

Solution 8-1: Using Subqueries to Solve Queries

1. The HR department needs a query that prompts the user for an employee's last name. The query then displays the last name and hire date of any employee in the same department as the employee whose name the user supplies (excluding that employee). For example, if the user enters <code>Zlotkey</code>, find all employees who work with Zlotkey (excluding Zlotkey).

Note: UNDEFINE and SELECT are individual queries; execute them one after the other or press Ctrl + A + F9 to run them together.

2. Create a report that displays the employee number, last name, and salary of all employees who earn more than the average salary. Sort the results in ascending order by salary.

3. Write a query that displays the employee number and last name of all employees who work in a department with any employee whose last name contains the letter "u." Save your SQL statement as lab 08 03.sql. Run your query.

```
SELECT employee_id, last_name
FROM employees
WHERE department_id IN (SELECT department_id
FROM employees
WHERE last_name like '%u%');
```

 The HR department needs a report that displays the last name, department number, and job ID of all employees whose department location ID is 1700.

Modify the query so that the user is prompted for a location ID. Save this to a file named lab 08 04.sql.

5. Create a report for HR that displays the last name and salary of every employee who reports to King.

6. Create a report for HR that displays the department number, last name, and job ID for every employee in the Executive department.

7. Create a report that displays a list of all employees whose salary is more than the salary of any employee from department 60.

If you have time, complete the following exercise:

8. Modify the query in lab_08_03.sql to display the employee number, last name, and salary of all employees who earn more than the average salary and who work in a department with any employee whose last name contains the letter "u." Save lab_08_03.sql to lab_08_08.sql again. Run the statement in lab_08_08.sql.

```
SELECT employee id, last name, salary
           FROM
                  employees
                  department id IN (SELECT department id
           WHERE
                                    FROM
                                           employees
                                    WHERE
                                           last name like '%u%')
ANG LIU (gangl@baylorhealth edu) has a non-transferable license this Student
           AND salary > (SELECT AVG(salary)
```

-transferable license **Practices for Lesson 9: Using** ane Se Chapter 9. Chapter 9. ANG LIU (ganglobaylorhealth students the Set Operators

Practices for Lesson 9: Overview

Practice Overview

In this practice, you create reports by using the following set operators:

- UNION
- INTERSECT
- MINUS

ANG LIU (gangl@baylorhealth edu) has a non-transferable license this Student Guide.

Practice 9-1: Using Set Operators

Overview

In this practice, you write queries by using the set operators UNION, INTERSECT, and MINUS.

Tasks

The HR department needs a list of department IDs for departments that do not contain the job ID ST CLERK. Use the set operators to create this report.

	A	DEPARTMENT_ID
1		10
2		20
3		60
4		80
5		90
6		110
7		190

sferable license The HR department needs a list of countries that have no departments located in them. Display the country IDs and the names of the countries. Use the set operators to create this report.

Produce a list of all the employees who work in departments 50 and 80. Display the 3. employee ID, job ID, and department ID by using the set operators.

		EMPLOYEE_ID	JOB_ID	DEPARTMENT_ID
	1	124	ST_MAN	50
\	2	141	ST_CLERK	50
10	3	142	ST_CLERK	50
	4	143	ST_CLERK	50
	5	144	ST_CLERK	50
	6	149	SA_MAN	80
	7	174	SA_REP	80
	8	176	SA_REP	80

Create a report that lists the details of all employees who are sales representatives and are currently working in the sales department.

- The HR department needs a report with the following specifications:
 - Last names and department IDs of all employees from the EMPLOYEES table, regardless of whether or not they belong to a department
 - Department IDs and department names of all departments from the DEPARTMENTS table, regardless of whether or not they have employees working in them

Copyright © 2016, Oracle and/or its affiliates. All rights reserved.

Write a compound query to accomplish this report.

	LAST_NAME	DEPARTMENT_ID	DEPT_NAME
1	Abel	_	(null)
	Davies		(null)
3	De Haan	90	(null)
4	Ernst	60	(nu11)
5	Fay	20	(nu11)
6	Gietz	110	(null)
7	Grant	(null)	(null)
8	Hartstein	20	(null)
9	Higgins	110	(null)
10	Huno1d	60	(null)
11	King	90	(nu11)
12	Kochhar	90	(null)
13	Lorentz	60	(null)
14	Matos	50	(null)
15	Mourgos	50	(null)
16	Rajs	50	(nu11)

26	(nu11)	90	Executive
27	(nu11)	110	Accounting
28	(null)	190	Contracting

Solution 9-1: Using Set Operators

The HR department needs a list of department IDs for departments that do not contain the job ID ST CLERK. Use the set operators to create this report.

```
SELECT department id
FROM
       departments
MINUS
SELECT department id
FROM
       employees
       job id = 'ST CLERK';
WHERE
```

The HR department needs a list of countries that have no departments located in them. Display the country IDs and the names of the countries. Use the set operators to create this report.

```
has a non-transferable license
SELECT country id, country name
FROM countries
MINUS
SELECT 1.country id, c.country name
FROM locations 1 JOIN countries c
ON (l.country id = c.country id)
JOIN departments d
ON d.location id=1.location id;
```

Produce a list of all the employees who work in departments 50 and 80. Display the employee ID, job ID, and department ID by using the set operators.

```
SELECT employee id, job id, department id
FROM EMPLOYEES
WHERE department id=50
UNION ALL
SELECT employee id, job id, department id
FROM EMPLOYEES
WHERE department id=80;
```

Create a report that lists the detail of all employees who are sales representatives and are currently working in the sales department.

```
SELECT EMPLOYEE ID
FROM EMPLOYEES
WHERE JOB ID='SA REP'
INTERSECT
SELECT EMPLOYEE ID
FROM EMPLOYEES
WHERE DEPARTMENT ID=80;
```

- 5. The HR department needs a report with the following specifications:
 - Last names and department IDs of all employees from the EMPLOYEES table, regardless of whether or not they belong to a department
 - Department IDs and department names of all departments from the DEPARTMENTS table, regardless of whether or not they have employees working in them

Write a compound query to accomplish this report.

```
SELECT last_name,department_id,TO_CHAR(null)dept_name
FROM employees
UNION
SELECT TO_CHAR(null),department_id,department_name
FROM departments;
```

Chapter 10

Practices for Lesson 10: Overview

Lesson Overview

This practice covers the following topics:

- Inserting rows into tables
- Updating and deleting rows in a table
- Controlling transactions

Note: Before starting this practice, execute the

/home/oracle/labs/sql1/code_ex /cleanup_scripts/cleanup_10.sql script.

Practice 10-1: Managing Tables by Using DML Statements

Overview

The HR department wants you to create SQL statements to insert, update, and delete employee data. As a prototype, you use the MY_EMPLOYEE table before giving the statements to the HR department.

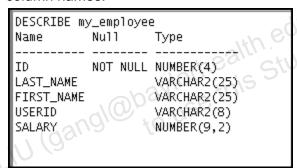

Note

- For all DML statements, use the Run Script icon (or press F5) to execute the query. You can see the feedback messages on the Script Output tabbed page. For SELECT queries, continue to use the Execute Statement icon or press F9 to get the formatted output on the Results tabbed page.
- Execute the cleanup_10.sql script from /home/oracle/labs/sql1/code_ex /cleanup_scripts/ before performing the following tasks.

 ks

Tasks

1. Run the lab_10_01.sql script from /home/oracle/labs/sql1/labs/ to create the MY_EMPLOYEE table. Describe the structure of the MY_EMPLOYEE table to identify the column names.

2. Create an INSERT statement to add the *first row* of data to the MY_EMPLOYEE table from the following sample data. Do not list the columns in the INSERT clause. *Do not enter all rows yet.*

ID	LAST_NAME	FIRST_NAME	USERID	SALARY	
1	Patel	Ralph	rpatel	895	
2	Dancs	Betty	bdancs	860	
3	Biri	Ben	bbiri	1100	license
4	Newman	Chad	cnewman	750 rable	//Co.
5	Ropeburn	Audrey	aropebur	1550	

- 3. Populate the MY_EMPLOYEE table with the second row of the sample data from the preceding list. This time, list the columns explicitly in the INSERT clause.
- 4. Confirm your addition to the table.

	D LAST_NAME	FIRST_NAME	2 USERID	2 SALARY
1	1 Patel	Ralph	rpatel	895
2	2 Dancs	Betty	bdancs	860

- 5. Write an INSERT statement in a dynamic reusable script file to load the next two rows of sample data into the MY_EMPLOYEE table. The script should prompt for all the columns (ID, LAST_NAME, FIRST_NAME, USERID, and SALARY). Save this script to a lab_10_06.sql file.
- 6. Populate the table with the next two rows of the sample data listed in step 3 by running the INSERT statement in the script that you created.
- 7. Confirm your additions to the table.

	2 ID	LAST_NAME	FIRST_NAME	2 USERID	SALARY
1	1	Patel	Ralph	rpatel	895
2	2	Dancs	Betty	bdancs	860
3	3	Biri	Ben	bbiri	1100
4	4	Newman	Chad	cnewman	750

8. Make the data additions permanent.

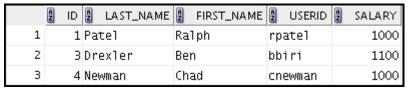

Update and delete data in the MY EMPLOYEE table.

- 9. Change the last name of employee 3 to Drexler.
- 10. Change the salary to \$1,000 for all employees who have a salary less than \$900.

11. Verify your changes to the table.

	A ID	LAST_NAME	FIRST_NAME	2 USERID	SALARY
1	1	Patel	Ralph	rpatel	1000
2	2	Dancs	Betty	bdancs	1000
3	3	Drexler	Ben	bbiri	1100
4	4	Newman	Chad	cnewman	1000

- 12. Delete Betty Dancs from the MY EMPLOYEE table.
- 13. Confirm your changes to the table.

14. Commit all pending changes.

Control the data transaction to the MY EMPLOYEE table.

sferable license 15. Populate the table with the last row of the sample data listed in step 3 by using the statements in the script that you created in step 6. Run the statements in the script.

Note: Perform the steps (17-23) in one session only.

16. Confirm your addition to the table.

- 17. Mark an intermediate point in the processing of the transaction.
- 18. Delete all the rows from the MY EMPLOYEE table.
- 19. Confirm that the table is empty.
- 20. Discard the most recent DELETE operation without discarding the earlier INSERT operation.
- 21. Confirm that the new row is still intact.

22. Make the data addition permanent.

If you have time, complete the following exercise:

23. Modify the lab 10 06.sql script such that the USERID is generated automatically by concatenating the first letter of the first name and the first seven characters of the last name. The generated USERID must be in lowercase. Therefore, the script should not prompt for the USERID. Save this script to a file named lab 10 24.sql.

24. Run the lab 10 24.sql script to insert the following record:

ID	LAST_NAME	FIRST_NAME	USERID	SALARY	
6	Anthony	Mark	manthony	1230	

25. Confirm that the new row was added with the correct USERID.

A) ID	A	LAST_NAME	A	FIRST_NAME	A	USERID	A	SALARY
1	6	Ant	thony	Ма	rk	ma	nthony		1230

Solution 10-1: Managing Tables by Using DML Statements

Insert data into the MY EMPLOYEE table.

1. Run the lab_10_01.sql script from /home/oracle/labs/sql1/labs/ to create the MY_EMPLOYEE table. Describe the structure of the MY_EMPLOYEE table to identify the column names.

```
DESCRIBE my_employee
```

2. Create an INSERT statement to add the first row of data to the MY_EMPLOYEE table from the following sample data. Do not list the columns in the INSERT clause. Do not enter all rows yet.

ID	LAST_NAME	FIRST_NAME	USERID	SALARY
1	Patel	Ralph	rpatel	895 \\\(\(\)CE
2	Dancs	Betty	bdancs	860
3	Biri	Ben	bbiri	1100
4	Newman	Chad	cnewman	750
5	Ropeburn	Audrey	aropebur	1550

```
INSERT INTO my_employee
   VALUES (1, 'Patel', 'Ralph', 'rpatel', 895);
```

3. Populate the MY_EMPLOYEE table with the second row of the sample data from the preceding list. This time, list the columns explicitly in the INSERT clause.

Confirm your additions to the table.

```
SELECT *
FROM my_employee;
```

5. Write an INSERT statement in a dynamic reusable script file to load the next two rows of sample data into the MY_EMPLOYEE table. The script should prompt for all the columns (ID, LAST_NAME, FIRST_NAME, USERID, and SALARY). Save this script to a file named lab 10 06.sql.

Populate the table with the next two rows of the sample data listed in step 3 by running the INSERT statement in the script that you created.

```
INSERT INTO my employee
VALUES (&id, '&last name', '&first name',
       '&userid', &salary);
```

7. Confirm your additions to the table.

```
SELECT
FROM my employee;
```

Make the data additions permanent.

```
COMMIT;
```

Update and delete data in the MY EMPLOYEE table.

Change the last name of employee 3 to Drexler.

```
transferable license.
        my employee
UPDATE
SET
        last name = 'Drexler'
WHERE
        id = 3;
```

10. Change the salary to \$1,000 for all employees with a salary less than \$900.

```
UPDATE my employee
SET
        salary = 1000
WHERE
        salary < 900;
```

11. Verify your changes to the table.

```
SELECT
FROM
        my employee;
```

12. Delete Betty Dancs from the MY EMPLOYEE table.

```
DELETE
FROM my employee
WHERE last name = 'Dancs';
```

13. Confirm your changes to the table.

```
SELECT
FROM
        my employee;
```

14. Commit all pending changes.

```
COMMIT;
```

Control the data transaction to the MY EMPLOYEE table.

15. Populate the table with the last row of the sample data listed in step 3 by using the statements in the script that you created in step 6. Run the statements in the script.

```
INSERT INTO my employee
VALUES (&id, '&last name', '&first name',
   '&userid', &salary);
```

Note: Perform the steps (17-23) in one session only.

16. Confirm your addition to the table.

```
SELECT *
FROM my_employee;
```

17. Mark an intermediate point in the processing of the transaction.

```
SAVEPOINT step_17;
```

18. Delete all the rows from the MY EMPLOYEE table.

```
DELETE
FROM my_employee;
```

19. Confirm that the table is empty.

```
SELECT *
FROM my_employee;
```

20. Discard the most recent DELETE operation without discarding the earlier INSERT operation.

```
ROLLBACK TO step_17;
```

21. Confirm that the new row is still intact.

```
SELECT *
FROM my_employee;
```

22. Make the data addition permanent.

```
COMMIT;
```

If you have time, complete the following exercise:

23. Modify the lab_10_06.sql script such that the USERID is generated automatically by concatenating the first letter of the first name and the first seven characters of the last name. The generated USERID must be in lowercase. The script should, therefore, not prompt for the USERID. Save this script to a file named lab 10 24.sql.

```
INSERT INTO my_employee

VALUES (&id, '&&last_name', '&&first_name',
    lower(substr('&first_name', 1, 1) ||
    substr('&last_name', 1, 7)), &salary);

UNDEFINE first_name
UNDEFINE last_name
```

24. Run the lab_10_24.sql script to insert the following record:

ID	LAST_NAME	FIRST_NAME	USERID	SALARY
6	Anthony	Mark	manthony	1230

25. Confirm that the new row was added with the correct USERID.

```
SELECT *
FROM my_employee
WHERE ID='6';
```

Chapter 11

Practices for Lesson 11: Overview

Lesson Overview

This practice covers the following topics:

- Creating new tables
- Creating a new table by using the CREATE TABLE AS syntax
- Verifying that tables exist
- Altering tables
- Adding columns
- Dropping columns
- Setting a table to READ ONLY status
- Dropping tables

Note: Before starting this practice, execute the

ible license ANG LIU (gangl@baylorhealth.edu) has a non-tra /home/oracle/labs/sql1/code_ex/cleanup_scripts/cleanup_11.sql script.

Practice 11-1: Introduction to Data Definition Language

Overview

In this practice, you create new tables by using the CREATE TABLE statement. Confirm that the new table was added to the database. You also learn to set the status of a table as READ ONLY, and then revert to READ WRITE. You use the ALTER TABLE command to modify table columns.

Notes

- For all DDL and DML statements, click the Run Script icon (or press F5) to execute the
 query in SQL Developer. Thus, you get to see the feedback messages on the Script
 Output tabbed page. For SELECT queries, continue to click the Execute Statement icon
 or press F9 to get the formatted output on the Results tabbed page.
- Execute the cleanup_11.sql script from /home/oracle/labs/sql1/code_ex/cleanup_scripts/cleanup_11.sql before performing the following tasks.

Tasks

1. Create the DEPT table based on the following table instance chart. Save the statement in the lab_11_01.sql script, and then execute the statement in the script to create the table. Confirm that the table is created.

Column Name	ID edul Gul	NAME		
Key Type	Primary key			
Nulls/Unique	ornos Sto			
FK Table	ce IIII			
FK Column				
Data type	NUMBER	VARCHAR2		
Length	7	25		

DESCRIBE dept Name Null Type						
Name	Nu11		Туре			
ID	NOT	NULL	NUMBER(7)			
NAME			VARCHAR2(25)			
			NUMBER(7) VARCHAR2(25)			

2. Create the EMP table based on the following table instance chart. Save the statement in the lab 11 02.sql script, and then execute the statement in the script to create the table. Confirm that the table is created.

Column Name	ID	LAST_NAME	FIRST_NAME	DEPT_ID		
Key Type						
Nulls/Unique						
FK Table				DEPT		
FK Column				ID		
Data type	NUMBER	VARCHAR2	VARCHAR2	NUMBER		
Length	7	25	25	7		
Name						

Name N	u11	Type
ID		NUMBER(7)
LAST_NAME		VARCHAR2(25)
FIRST_NAME		VARCHAR2(25)
DEPT_ID		NUMBER(7)

3. Modify the EMP table. Add a COMMISSION column of the NUMBER data type, with precision 2 and scale 2. Confirm your modification.

Table EMP a	alter	ed.
Name	Nu11	Type \\O\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\
ID LAST_NAME FIRST_NAME DEPT_ID COMMISSION	1910	NUMBER(7) VARCHAR2(25) VARCHAR2(25) NUMBER(7) NUMBER(2,2)

4. Modify the EMP table to allow for longer employee last names. Confirm your modification.

Table EMP altered.					
Name	Nu11	Туре			
ID		NUMBER(7)			
LAST_NAME		VARCHAR2(50)			
FIRST_NAME		VARCHAR2(25)			
DEPT_ID		NUMBER(7)			
COMMISSION		NUMBER(2,2)			
I					

5. Drop the FIRST NAME column from the EMP table. Confirm your modification by checking the description of the table.

Table EMP a	alter	ed.
Name 	Nu11	Type
ID LAST_NAME DEPT_ID COMMISSION	į	NUMBER(7) VARCHAR2(50) NUMBER(7) NUMBER(2,2)

6. In the EMP table, mark the DEPT ID column as UNUSED. Confirm your modification by has a non-transferable license checking the description of the table.

Table EMP altered.				
Name Null	Type			
ID LAST_NAME COMMISSION	NUMBER(7) VARCHAR2(50) NUMBER(2,2)			

- 7. Drop all of the UNUSED columns from the EMP table.
- 8. Create the EMPLOYEES2 table based on the structure of the EMPLOYEES table. Include only the EMPLOYEE ID, FIRST NAME, LAST NAME, SALARY, and DEPARTMENT ID columns. Name the columns in your new table ID, FIRST NAME, LAST NAME, SALARY, and DEPT ID, respectively. Confirm that the table is created.

	Name Name	Nu11	Type
ANG LII	ID FIRST_NAME LAST_NAME SALARY DEPT_ID	NOT NULL	NUMBER(6) VARCHAR2(20) VARCHAR2(25) NUMBER(8,2) NUMBER(4)

- 9. Alter the status of the EMPLOYEES2 table to READ ONLY.
- 10. Try to delete all rows in the EMPLOYEES2 table.

Note: You will get the "Update operation not allowed on table" error message. You will not be allowed to delete data from the table because it is assigned a READ ONLY status.

```
Error starting at line: 7 in command -
truncate table employees2
Error report -
SQL Error: ORA-12081: update operation not allowed on table "ORA1"."EMPLOYEES2"
12081. 00000 - "update operation not allowed on table \"%s\".\"%s\""
           An attempt was made to update a read-only materialized view.
*Action:
           No action required. Only Oracle is allowed to update a
           read-only materialized view.
```

11. Revert the EMPLOYEES2 table to the READ WRITE status. Now try to truncate the rows again.

Now, because the table is assigned a READ WRITE status, you will be allowed to truncate rows in the table.

You should get the following messages:

Solution 11-1: Introduction to Data Definition Language

1. Create the DEPT table based on the following table instance chart. Save the statement in a script called lab_11_01.sql, and then execute the statement in the script to create the table. Confirm that the table is created.

Column Name	ID	NAME	
Key Type	Primary key		
Nulls/Unique			
FK Table			
FK Column			
Data type	NUMBER	VARCHAR2	
Length	7	25	- ucens
		12/20	16 HO
CREATE TABLE de	nt	25/010	

```
CREATE TABLE dept
  (id NUMBER(7)CONSTRAINT department_id_pk PRIMARY KEY,
  name VARCHAR2(25));
```

To confirm that the table was created and to view its structure, issue the following command:

```
DESCRIBE dept;
```

 Create the EMP table based on the following table instance chart. Save the statement in a script called lab_11_02.sql, and then execute the statement in the script to create the table. Confirm that the table is created.

. 1/	Column Name	ID	LAST_NAME	FIRST_NAME	DEPT_ID
ANG LI	Key Type				
	Nulls/Unique				
	FK Table				DEPT
	FK Column				ID
	Data type	NUMBER	VARCHAR2	VARCHAR2	NUMBER
	Length	7	25	25	7

```
CREATE TABLE emp

(id NUMBER(7),
  last_name VARCHAR2(25),
  first_name VARCHAR2(25),
  dept_id NUMBER(7)
      CONSTRAINT emp_dept_id_FK REFERENCES dept (id)
);
```

To confirm that the table was created and to view its structure:

```
DESCRIBE emp
```

3. Modify the EMP table. Add a COMMISSION column of the NUMBER data type, with precision 2 and scale 2. Confirm your modification.

```
ALTER TABLE emp

ADD commission NUMBER(2,2);

DESCRIBE emp
```

4. Modify the EMP table to allow for longer employee last names. Confirm your modification.

```
ALTER TABLE emp

MODIFY last_name VARCHAR2(50);

DESCRIBE emp
```

5. Drop the FIRST_NAME column from the EMP table. Confirm your modification by checking the description of the table.

```
ALTER TABLE emp

DROP COLUMN first_name;

DESCRIBE emp
```

6. In the EMP table, mark the DEPT_ID column as UNUSED. Confirm your modification by checking the description of the table.

```
ALTER TABLE emp

SET UNUSED (dept_id);

DESCRIBE emp
```

7. Drop all of the UNUSED columns from the EMP table.

```
ALTER TABLE emp
DROP UNUSED COLUMNS;
```

8. Create the EMPLOYEES2 table based on the structure of the EMPLOYEES table. Include only the EMPLOYEE_ID, FIRST_NAME, LAST_NAME, SALARY, and DEPARTMENT_ID columns. Name the columns in your new table ID, FIRST_NAME, LAST_NAME, SALARY, and DEPT_ID, respectively. Confirm that the table is created.

```
CREATE TABLE employees2 AS

SELECT employee_id id, first_name, last_name, salary,

department_id dept_id

FROM employees;

DESCRIBE employees2
```

9. Alter the EMPLOYEES2 table status to READ ONLY.

```
ALTER TABLE employees2 READ ONLY;
```

10. Try to delete all rows in the EMPLOYEES2 table.

Note: You will get the "Update operation not allowed on table" error message. You will not be allowed to delete data from the table because it is assigned a READ ONLY status.

```
TRUNCATE TABLE employees2;
```

11. Revert the EMPLOYEES2 table to the READ WRITE status. Now try to truncate the rows again.

Now, because the table is assigned a READ WRITE status, you will be allowed to truncate rows in the table.

```
ALTER TABLE employees2 READ WRITE;

TRUNCATE TABLE employees2;

SELECT * from employees2;
```

12. Drop the EMP, DEPT, and EMPLOYEES2 table.

Note: You can even drop a table that is in the READ ONLY status. To test this, alter the table again to READ ONLY status, and then issue the DROP TABLE command. The tables will be dropped.

```
DROP TABLE emp;
DROP TABLE dept;
DROP TABLE employees2;
```

Practices for Lesson 1: Overview

Practices Overview

In these practices, you will be working on extra exercises that are based on the following topics:

- Basic SQL SELECT statement
- Basic SQL Developer commands
- SQL functions

Practice 1-1: Additional Practice

Overview

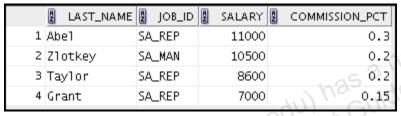

In this practice, exercises have been designed to be worked on after you have discussed the following topics: basic SQL SELECT statement, basic SQL Developer commands, and SQL functions.

Tasks

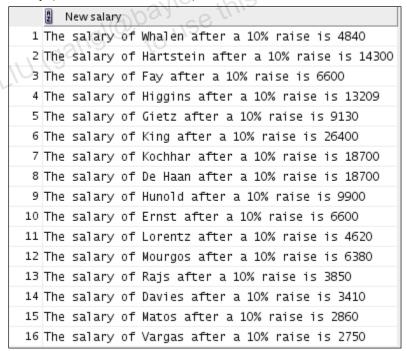

1. The HR department needs to find data for all the clerks who were hired after 2010.

The HR department needs a report of employees who earn a commission. Show the last ı-transferable name, job, salary, and commission of these employees. Sort the data by salary in descending order.

For budgeting purposes, the HR department needs a report on projected raises. The report should display those employees who have no commission, but who have a 10% raise in salary (round off the salaries).

Create a report of employees and their duration of employment. Show the last names of all the employees together with the number of years and the number of completed months that they have been employed. Order the report by the duration of their employment. The employee who has been employed the longest should appear at the top of the list.

		∯ YEARS	⊕ MONTHS
1	De Haan	7	7
2	Kochhar	6	10
3	Higgins	6	2
4	Gietz	6	2
5	King	5	2
6	Wha1en	4	11
7	Rajs	4	10
8	Hartstein	4	6
9	Abe1	4	3
10	Davies	3	6
11	Fay	3	0
12	Huno1d	2	7
13	Matos	2	5
14	Taylor	2	4
15	Vargas	2	1
16	Lorentz	1	6
17	Ernst	1	2
18	Grant	1	2
_	Mourgos	0	9
20	Z1otkey	0	6

dul has a non-transferable license Show those employees who have a last name starting with the letters "K," "L," or "M." 5.

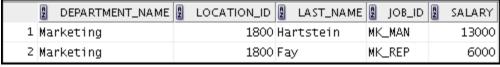

6. Create a report that displays all employees, and indicate whether they receive a commission by using the words Yes or No. Use the DECODE expression in your query.

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statements, basic SQL Developer commands, SQL functions, joins, and group functions.

7. Create a report that displays the department name, location ID, last name, job title, and salary of those employees who work in a specific location. Prompt the user for a location. For example, if the user enters 1800, results are as follows:

8. Find the number of employees who have a last name that ends with the letter "n." Create two possible solutions.

Create a report that shows the name, location, and number of employees for each department. Make sure that the report also includes department IDs without employees.

	2 DEPA	RTMENT_ID	A	DEPARTMENT_NAME	Ð	LOCATION_ID	A	COUNT(E.EMPLOYEE_ID)
1		80	Sa	les		2500		3
2		110	Aci	counting		1700		2
3		60	IT			1400		3
4		10	Adı	ministration		1700		1
5		90	Ex	ecutive		1700		3
6		20	Ma	rketing		1800		2
7		50	Sh	ipping		1500		5
8		190	Cor	ntracting		1700		0

n-transferable license 10. The HR department needs to find the job titles in departments 10 and 20. Create a report to display the job IDs for those departments.

11. Create a report that displays the jobs that are found in the Administration and Executive departments. Also display the number of employees for these jobs. Show the job with the this Student highest number of employees first.

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statements, basic SQL Developer commands, SQL functions, joins, group functions, and subqueries.

12. Show all the employees who were hired in the first half of the month (before the 16th of the month, irrespective of the year).

13. Create a report that displays the following for all employees: last name, salary, and salary expressed in terms of thousands of dollars.

	LAST_NAME	SALARY 2	THOUSANDS
1	King	24000	24
2	Kochhar	17000	17
3	De Haan	17000	17
4	Hunold	9000	9
5	Ernst	6000	6
6	Lorentz	4200	4
7	Mourgos	5800	5
8	Rajs	3500	3
9	Davies	3100	3
10	Matos	2600	2
11	Vargas	2500	3 2 2 10 11 8 7 4 13
12	Zlotkey	10500	10
13	Abel	11000	11
14	Taylor	8600	8
15	Grant	7000	7
16	Wha1 en	4400	4
17	Hartstein	13000	13
18	Fay	6000	13.
19	Higgins	12008	12
20	Gietz	8300	518

14. Show all the employees who have managers with a salary higher than \$15,000. Show the following data: employee name, manager name, manager salary, and salary grade of the manager.

U	LAST_NAME	MANAGER	SALARY	grade_level
1	Kochhar	King	24000	E
2	De Haan	King	24000	E
3	Mourgos	King	24000	E
4	Zlotkey	King	24000	E
5	Hartstein	King	24000	E
6	Whalen	Kochhar	17000	E
7	Higgins	Kochhar	17000	E
8	Huno1d	De Haan	17000	E

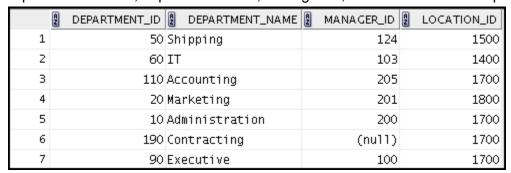

15. Show the department number, department name, number of employees, and average salary of all the departments, together with the employee names, salaries, and jobs of the employees working in each department.

A	DEPARTMENT_ID 2 DEPARTMENT_NAME 2	EMPLOYEES	AVG_SAL	LAST_NAME	SALARY	∄ JOB_ID
1	10 Administration	1	4400.00	Wha1en	4400	AD_ASST
2	20 Marketing	2	9500.00	Hartstein	13000	MK_MAN
3	20 Marketing	2	9500.00	Fay	6000	MK_REP
4	50 Shipping	5	3500.00	Davies	3100	ST_CLERK
5	50 Shipping	5	3500.00	Matos	2600	ST_CLERK
6	50 Shipping	5	3500.00	Rajs	3500	ST_CLERK
7	50 Shipping	5	3500.00	Mourgos	5800	ST_MAN
8	50 Shipping	5	3500.00	Vargas	2500	ST_CLERK
9	60 IT	3	6400.00	Hunold	9000	IT_PR0G
10	60 IT	3	6400.00	Lorentz	4200	IT_PROG
11	60 IT	3	6400.00	Ernst	6000	IT_PROG
12	80 Sales	3	10033.33	Zlotkey	10500	SA_MAN
13	80 Sales	3	10033.33	Abel c	11000	SA_REP
14	80 Sales	3	10033.33	Taylor S	8600	SA_REP

18	110 Accounting	1/2	10154.00	Gietz	8300	AC_ACCOUNT
19	110 Accounting	dU1 ,2	10154.00	Higgins	12008	AC_MGR
20	(null) (null)	16U/01	lo average	Grant	7000	SA_REP

16. Create a report to display the department number and lowest salary of the department with the highest average salary.

17. Create a report that displays departments where no sales representatives work. Include the department number, department name, manager ID, and location in the output.

- 18. Create the following statistical reports for the HR department. Include the department number, department name, and the number of employees working in each department that:
 - Employs fewer than three employees:

A	DEPARTMENT_ID	DEPARTMENT_NAME	COUNT(*)
1	10	Administration	1
2	110	Accounting	2
3	20	Marketing	2

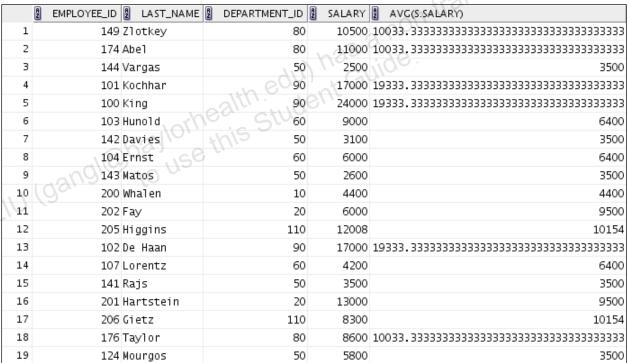

Has the highest number of employees:

	A	DEPARTMENT_ID	A	DEPARTMENT_NAME	A	COUNT(*)
1		50	Sh	ipping		5

Has the lowest number of employees:

ile license 19. Create a report that displays the employee number, last name, salary, department number, and the average salary in their department for all employees.

20. Create an anniversary overview based on the hire date of the employees. Sort the anniversaries in ascending order.

Solution 1-1: Additional Practice

Overview

Solutions to Additional Practice 1-1 are given as follows.

Tasks

1. The HR department needs to find data for all the clerks who were hired after 2010.

```
SELECT *
FROM employees
WHERE job_id = 'ST_CLERK'
AND hire_date > '31-DEC-2010';
```

2. The HR department needs a report of employees who earn a commission. Show the last name, job, salary, and commission of these employees. Sort the data by salary in descending order.

```
SELECT last_name, job_id, salary, commission_pct
FROM employees
WHERE commission_pct IS NOT NULL
ORDER BY salary DESC;
```

3. For budgeting purposes, the HR department needs a report on projected raises. The report should display those employees who do not get a commission but who have a 10% raise in salary (round off the salaries).

4. Create a report of employees and the duration of their employment. Show the last names of all employees, together with the number of years and the number of completed months that they have been employed. Order the report by the duration of their employment. The employee who has been employed the longest should appear at the top of the list.

5. Show those employees who have a last name that starts with the letters "K," "L," or "M."

```
SELECT last_name
FROM employees
WHERE SUBSTR(last_name, 1,1) IN ('K', 'L', 'M');
```

6. Create a report that displays all employees, and indicate whether they receive a commission by using the words Yes or No. Use the DECODE expression in your query.

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statement, basic SQL Developer commands, SQL functions, joins, and group functions.

7. Create a report that displays the department name, location ID, last name, job title, and salary of those employees who work in a specific location. Prompt the user for a location.

Enter 1800 for location id when prompted.

```
SELECT d.department_name, d.location_id, e.last_name, e.job_id,
e.salary
FROM employees e JOIN departments d
ON e.department_id = d.department_id
AND d.location_id = &location_id;
```

8. Find the number of employees who have a last name that ends with the letter "n." Create two possible solutions.

```
SELECT COUNT(*)
FROM employees
WHERE last_name LIKE '%n';
--or
SELECT COUNT(*)
FROM employees
WHERE SUBSTR(last_name, -1) = 'n';
```

9. Create a report that shows the name, location, and number of employees for each department. Make sure that the report also includes department. IDs without employees.

10. The HR department needs to find the job titles in departments 10 and 20. Create a report to display the job IDs for these departments.

```
SELECT DISTINCT job_id

FROM employees

WHERE department_id IN (10, 20);
```

11. Create a report that displays the jobs that are found in the Administration and Executive departments. Also display the number of employees for these jobs. Show the job with the highest number of employees first.

```
SELECT e.job_id, count(e.job_id) FREQUENCY
FROM employees e JOIN departments d
ON e.department_id = d.department_id
WHERE     d.department_name IN ('Administration', 'Executive')
GROUP BY e.job_id
ORDER BY FREQUENCY DESC;
```

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statements, basic SQL Developer commands, SQL functions, joins, group functions, and subqueries.

12. Show all employees who were hired in the first half of the month (before the 16th of the month, irrespective of the year).

```
SELECT last_name, hire_date

FROM employees

WHERE TO_CHAR(hire_date, 'DD') < 16;
```

13. Create a report that displays the following for all employees: last name, salary, and salary expressed in terms of thousands of dollars.

```
SELECT last_name, salary, TRUNC(salary, -3)/1000 Thousands FROM employees;
```

14. Show all employees who have managers with a salary higher than \$15,000. Show the following data: employee name, manager name, manager salary, and salary grade of the manager.

```
SELECT e.last_name, m.last_name manager, m.salary,
j.grade_level
FROM employees e JOIN employees m
ON e.manager_id = m.employee_id
JOIN job_grades j
ON m.salary BETWEEN j.lowest_sal AND j.highest_sal
AND m.salary > 15000;
```

15. Show the department number, department name, number of employees, and average salary of all departments, together with the employee names, salaries, and jobs of the employees working in each department.

```
SELECT
        d.department id, d.department name,
        count(e1.employee id) employees,
        NVL(TO CHAR(AVG(e1.salary), '99999.99'), 'No average')
avg sal,
        e2.last name, e2.salary, e2.job id
        departments d RIGHT OUTER JOIN employees e1
FROM
        d.department id = e1.department id
ON
RIGHT OUTER JOIN employees e2
      d.department id = e2.department id
                                                    iterable license
GROUP BY d.department id, d.department name, e2.last name,
e2.salary,
         e2.job id
ORDER BY d.department id, employees;
```

16. Create a report to display the department number and lowest salary of the department with the highest average salary.

17. Create a report that displays the departments where no sales representatives work. Include the department number, department name, manager ID, and location in the output.

- 18. Create the following statistical reports for the HR department. Include the department number, department name, and the number of employees working in each department that:
 - a. Employs fewer than three employees:

```
SELECT d.department_id, d.department_name, COUNT(*)
FROM departments d JOIN employees e
ON d.department_id = e.department_id
GROUP BY d.department_id, d.department_name
HAVING COUNT(*) < 3;</pre>
```

b. Has the highest number of employees:

c. Has the lowest number of employees:

19. Create a report that displays the employee number, last name, salary, department number, and the average salary in their department for all employees.

```
SELECT e.employee_id, e.last_name, e.department_id, e.salary, AVG(s.salary)

FROM employees e JOIN employees s

ON e.department_id = s.department_id

GROUP BY e.employee_id, e.last_name, e.department_id, e.salary;
```

20. Create an anniversary overview based on the hire date of employees. Sort the anniversaries in ascending order.

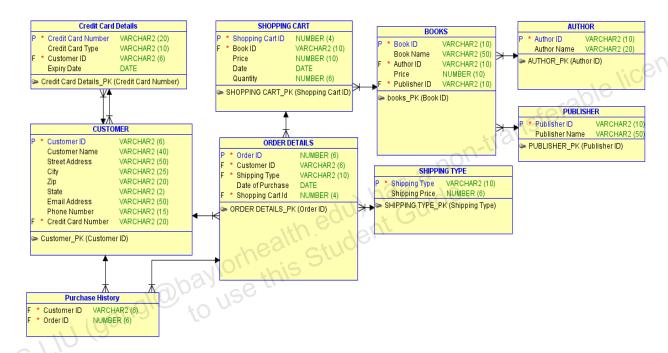

```
SELECT last_name, TO_CHAR(hire_date, 'Month DD') BIRTHDAY
FROM employees
ORDER BY TO_CHAR(hire_date, 'DDD');
```

Case Study: Online Book Store

Overview

In this case study, you build a set of database tables for an online book store (E-Commerce Shopping Cart). After you create the tables, you insert, update, and delete records in the book store database and generate a report. The database contains only the essential tables.

The following is a diagram of the table and columns for the online book store application:

Note: If you want to build the tables, you can execute the commands in the $Online_Book_Store_Create_Table.sql$ script in SQL Developer. If you want to drop the tables, you can execute the commands in the $Online_Book_Store_Drop_Tables.sql$ script in SQL Developer. Then you can execute the commands in the << $Online_Book_Store_Populate.sql>>$ script in SQL Developer to create and populate the tables.

All the three SQL scripts are present in the /home/oracle/labs/sql1/labs folder.

- If you use the Online_Book_Store_Create_Table.sql script to build the tables, start with step 2.
- If you use the Online_Book_Store_Drop_Tables.sql script to remove the tables, start with step 1.
- If you use the Online_Book_Store_Populate.sql script to build and populate the tables, start with step 6.

Practice 1-2

Overview

In this practice, you create the tables based on the following table instance charts. Select the appropriate data types and be sure to add integrity constraints.

Tasks

1. Table Details

a. Table Name: AUTHOR

Column	Data type	Key	Table Dependent Type
Author_ID	VARCHAR2	PK	
Author_Name	VARCHAR2		

b. Table Name: BOOKS

Column	Datatype	Key	Table Dependent On
Book_ID	VARCHAR2	PK	£61.91
Book_Name	VARCHAR2		· ansi
Author_ID	VARCHAR2	FK	AUTHORS
Price	NUMBER		3 100,
Publisher_ID	VARCHAR2	FK	PUBLISHER

c. Table Name: CUSTOMER

Column Name	Data type	Key	Table Dependent On
Customer_ID	VARCHAR2	PK	
Customer_Name	VARCHAR2		
Street_Address	VARCHAR2		
City	VARCHAR2		
Phone_Number	VARCHAR2		
Credit_Card_Number	VARCHAR2	FK	Credit_Card_Details

d. CREDIT CARD DETAILS

Column Name	Data type	Key	Table Dependent On
Credit_Card_Number	VARCHAR2	PK	
Credit_Card_Type	VARCHAR2		
Expiry_Date	DATE		

e. Table Name: ORDER DETAILS

Column	Data type	Key	Table Dependent On
Order_ID	NUMBER	PK	
Customer_ID	VARCHAR2	FK	CUSTOMER
Shipping_Type	VARCHAR2	FK	SHIPPING_TYPE
Date_of_Purchase	DATE		
Shopping_Cart_ID	NUMBER	FK	SHOPPING_CART

f. Table Name: PUBLISHER

Column	Data type	Key	Table Dependent Type
Publisher_ID	VARCHAR2	PK	
Publisher_Name	VARCHAR2		

g. Table Name: PURCHASE HISTORY

Column	Data type	Key	Table Dependent Type
Customer_ID	VARCHAR2	FK	CUSTOMER
Order_ID	NUMBER	FK	ORDER_DETAILS

h. Table Name: SHIPPING TYPE

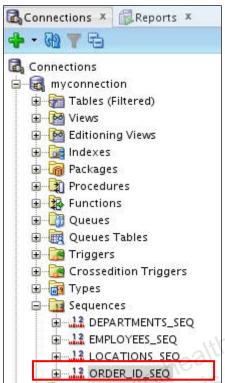

Column	Data type	Key	Table Dependent Type
Shipping_Type	VARCHAR2	PK	
Shipping_Price	NUMBER		

i. Table Name: SHOPPING CART

Column	Data type	Key	Table Dependent On
Shopping_Cart_ID	NUMBER	PK	stere
Book_ID	VARCHAR2	FK	BOOKS
Price	NUMBER		20/1-0
Shopping_Cart_Date	DATE	. 25	3
Quantity	NUMBER	"I Was	ide.

- 2. Add additional Referential Integrity constraints to the tables created.
- Verify that the tables were created properly by checking in the Connections Navigator in SQL Developer.

- Create a sequence to uniquely identify each row in the ORDER DETAILS table.
 - Start with 100; do not allow caching of the values. Name the sequence ORDER ID SEQ.
 - Verify the existence of the sequences in the Connections Navigator in SQL Developer.

hedu) has a non-transferable license Student Guide. Add data to the tables. Create a script for each set of data to be added.

Add data to the following tables:

- AUTHOR a.
- b. **PUBLISHER**
- SHIPPING TYPE
- d. CUSTOMER
- CREDIT CARD DETAILS e.
- f. BOOKS
- g. SHOPPING CART
- h. ORDER DETAILS
- i. PURCHASE HISTORY

Note: Save the scripts by using the task number. For example, to save the script created for the AUTHOR table, you can save it as labs apcs 5a_1.sql. Ensure that you save the scripts in /home/oracle/labs/sql1/labs folder.

6. Create a view named CUSTOMER_DETAILS to show the Customer Name, Customer Address, and the details of the order placed by the customer. Order the results by Customer ID.

		♦ ORDER_ID				\$ SHOPPING_CART_ID
1 VelasquezCarmen	283 King Street	0D0001	CN0001	USPS	12-JUN-11	SC0002
2 Ngao LaDoris	5 Modrany	0D0002	CN0002	USPS	28-JUN-15	SC0005
3 Nagayama Midori	68 Via Centrale	0D0003	CN0003	FedEx	31-JUL-14	SC0007
4 Quick-To-See Mark	6921 King Way	0D0004	CN0004	FedEx	14-AUG-16	SC0004

8. Create a report that contains each customer's history of purchasing books. Be sure to include the customer name, customer ID, book ID, date of purchase, and shopping cart ID. Save the commands that generate the report in a script file named lab_apcs_8.sql.

Note: Your results may be different.

Solution 1-2

Overview

The solution to Practice 1-2 is given as follows.

Tasks

- 1. Table Details
 - a. AUTHOR

```
CREATE TABLE AUTHOR

(
    Author_ID VARCHAR2 (10) NOT NULL ,
    Author_Name VARCHAR2 (20)
);

COMMENT ON TABLE AUTHOR IS 'Author'
;

ALTER TABLE AUTHOR
    ADD CONSTRAINT AUTHOR_PK PRIMARY KEY (Author_ID);
```

b. BOOKS

```
CREATE TABLE BOOKS

(

Book_ID VARCHAR2 (10) NOT NULL ,

Book_Name VARCHAR2 (50) ,

Author_ID VARCHAR2 (10) NOT NULL ,

Price NUMBER (10) ,

Publisher_ID VARCHAR2 (10) NOT NULL )

;

COMMENT ON TABLE BOOKS IS 'Books'

;

ALTER TABLE BOOKS

ADD CONSTRAINT books_PK PRIMARY KEY ( Book_ID );
```

C. CUSTOMER

```
CREATE TABLE CUSTOMER

(

Customer_ID VARCHAR2 (6) NOT NULL ,

Customer_Name VARCHAR2 (40) ,

Street_Address VARCHAR2 (50) ,

City VARCHAR2 (25) ,

Phone_Number VARCHAR2 (15) ,

Credit_Card_Number VARCHAR2 (20) NOT NULL
)

;

COMMENT ON TABLE CUSTOMER IS 'Customer';

;

ALTER TABLE CUSTOMER

ADD CONSTRAINT Customer_PK PRIMARY KEY ( Customer_ID ) ;
```

d. CREDIT CARD DETAILS

```
CREATE TABLE CREDIT_CARD_DETAILS

(
    Credit_Card_Number VARCHAR2 (20) NOT NULL ,
    Credit_Card_Type VARCHAR2 (15) ,
    Expiry_Date DATE
);

COMMENT ON TABLE CREDIT_CARD_DETAILS IS 'Credit Card Details';

;

ALTER TABLE CREDIT_CARD_DETAILS
    ADD CONSTRAINT Credit_Card_Details_PK PRIMARY KEY (
Credit_Card_Number) ;
```

e. ORDER DETAILS

```
CREATE TABLE ORDER DETAILS
Order ID VARCHAR2 (6) NOT NULL ,
 Customer ID VARCHAR2 (6) NOT NULL ,
    Shipping Type VARCHAR2 (10) NOT NULL,
Date_of_Purchase DATE ,
    Shopping Cart_ID varchar2(6) NOT NULL
;
  .. .ADLE ORDER_DETAILS
ADD CONSTRAINT ORDER_DETAILS_PK PRIMARY KEY (Order_ID );
3LISHER
ALTER TABLE ORDER DETAILS
```

PUBLISHER

```
CREATE TABLE PUBLISHER
                                  NOT NULL ,
      Publisher ID VARCHAR2 (10)
      Publisher Name VARCHAR2 (50)
COMMENT ON TABLE PUBLISHER IS 'Publisher'
ALTER TABLE PUBLISHER
    ADD CONSTRAINT PUBLISHER PK PRIMARY KEY ( Publisher ID) ;
```

PURCHASE HISTORY g.

```
CREATE TABLE PURCHASE HISTORY
Customer ID VARCHAR2 (6)
                           NOT NULL ,
Order ID VARCHAR2 (6) NOT NULL
```

Copyright © 2016, Oracle and/or its affiliates. All rights reserved.

```
COMMENT ON TABLE PURCHASE_HISTORY IS 'Purchase History';
```

h. SHIPPING TYPE

```
CREATE TABLE SHIPPING_TYPE

(
    Shipping_Type VARCHAR2 (10) NOT NULL ,
    Shipping_Price NUMBER (6)
);

COMMENT ON TABLE SHIPPING_TYPE IS 'Shipping Type'
;

ALTER TABLE SHIPPING_TYPE
    ADD CONSTRAINT SHIPPING_TYPE_PK PRIMARY KEY ( Shipping_Type );
```

SHOPPING CART

```
CREATE TABLE SHOPPING_CART

(
Shopping_Cart_ID VARCHAR2 (6) NOT NULL ,
Book_ID VARCHAR2 (10) NOT NULL ,
Price NUMBER (10) ,
Shopping_Cart_Date DATE ,
Quantity NUMBER (6)
)
;

COMMENT ON TABLE SHOPPING_CART IS 'Shopping Cart'
;

ALTER TABLE SHOPPING_CART
ADD CONSTRAINT SHOPPING_CART_PK PRIMARY KEY (SHOPPING_CART_ID)
;
```

Adding Additional Referential Integrity Constraints to the Table Created

Include a Foreign Key constraint in the CUSTOMER table.

```
ALTER TABLE CUSTOMER
    ADD CONSTRAINT CREDIT_CARD_FK FOREIGN KEY
     Credit Card Number
   REFERENCES CREDIT CARD DETAILS
                                        on-transferable license
      Credit_Card_Number
```

Include a Foreign Key constraint in the BOOKS table.

```
ALTER TABLE BOOKS
              ADD CONSTRAINT BOOKS_AUTHOR FK FOREIGN KEY
                                is Studer
               Author ID
              REFERENCES AUTHOR
MGLI
                Author ID
          ALTER TABLE BOOKS
              ADD CONSTRAINT BOOKS PUBLISHER FK FOREIGN KEY
               Publisher_ID
              REFERENCES PUBLISHER
               Publisher_ID
```

c. Include a Foreign Key constraint in the ORDER DETAILS table.

```
ALTER TABLE ORDER_DETAILS
    ADD CONSTRAINT Order_ID_FK FOREIGN KEY
      Customer ID
    REFERENCES CUSTOMER
      Customer_ID
   TABLE ORDER_DETAILS

ADD CONSTRAINT FK_Order_details FOREIGN KEY

(
Shipping_Type
)

REFERENCES SHIPPING_TYPE

(
Shipping The
;
ALTER TABLE ORDER DETAILS
              Jay use this Student Guide
ALTER TABLE ORDER DETAILS
    ADD CONSTRAINT Order Details fk FOREIGN KEY
       Shopping_Cart_ID
    REFERENCES SHOPPING CART
      Shopping_Cart_ID
```

d. Include a Foreign Key constraint in the PURCHASE HISTORY table.

```
ALTER TABLE PURCHASE_HISTORY

ADD CONSTRAINT Pur_Hist_ORDER_DETAILS_FK FOREIGN KEY

(
Order_ID
```

```
REFERENCES ORDER DETAILS
         Order ID
    )
ALTER TABLE PURCHASE HISTORY
    ADD CONSTRAINT Purchase History CUSTOMER FK FOREIGN KEY
     Customer ID
                                               ransferable license
    REFERENCES CUSTOMER
     Customer ID
    )
```

Include a Foreign Key constraint in the SHOPPING CART table.

```
ALTER TABLE SHOPPING CART
    ADD CONSTRAINT SHOPPING_CART_BOOKS FK FOREIGN KEY
                    this Stude
     Book ID
    REFERENCES BOOKS
      Book ID
```

- Verify that the tables were created properly by checking in the Connections Navigator in SQL Developer. In the Connections Navigator, expand Connections > myconnection > Tables.
- Create a sequence to uniquely identify each row in the ORDER DETAILS table.
 - a. Start with 100; do not allow caching of the values. Name the sequence ORDER ID SEQ.

```
CREATE SEQUENCE order id seq
START WITH 100
NOCACHE;
```

Verify the existence of the sequences in the Connections Navigator in SQL Developer.
 In the Connections Navigator, assuming that the myconnection node is expanded, expand Sequences.

Alternatively, you can also query the user_sequences data dictionary view:

SELECT * FROM user_sequences;

5. Add data to the tables.

a. AUTHOR Table

Author_ID	Author_Name
AN0001	Oliver Goldsmith
AN0002	Oscar Wilde

- 7. Make changes to the data in the tables.
 - a. Add a new book detail. Verify if the author detail for the book is available in the AUTHOR table. If not, make an entry in the AUTHOR table.

```
INSERT INTO books(book_id, book_name, author_id, price,
publisher_id)
VALUES ('BN0013','Two States','AN0009','150','PN0005');
SELECT * FROM books;
```

		🖁 BOOK_ID	BOOK_NAME	2 AUTHOR_ID	PRICE	PUBLISHER_ID
	1	BN0001	Florentine Tragedy	AN0002	150	PN0002
	2	BN0002	A Vision	AN0002	100	PN0003
	3	BN0003	Citizen of the World	AN0001	100	PN0001
	4	BN0004	The Complete Poetical Works of Oliver Goldsmith	AN0001	300	PN0001
	5	BN0005	Androcles and the Lion	AN0003	90	PN0004
ANG LIU	6	BN0006	An Unsocial Socialist	AN0003	80	PN0004
	7	BN0007	A Thing of Beauty is a Joy Forever	AN0007	100	PN0002
	8	BN0008	Beyond the Pale	AN0008	75	PN0005
	9	BN0009	The Clicking of Cuthbert	AN0009	175	PN0005
	10	BN0010	Bride of Frankenstein	AN0006	200	PN0001
	11	BN0011	Shelley Poetry and Prose	AN0005	150	PN0003
	12	BN0012	War and Peace	AN0004	150	PN0002
	13	BN0013	Two States	AN0009	150	PN0005

b. Enter a shopping cart detail for the book details that you just entered in 7(a).

```
INSERT INTO shopping_cart(shopping_cart_id, book_id, price,
Shopping_cart_date,quantity)
VALUES ('SC0010','BN0013','200',TO_DATE('12-JUN-2016','DD-MON-
YYYY'),'12');
SELECT * FROM shopping_cart;
```

8. Create a report that contains each customer's history of purchasing books. Be sure to include the customer name, customer ID, book ID, date of purchase, and shopping cart ID. Save the commands that generate the report in a script file named lab_apcs_8.sql.

Note: Your results may be different.

```
SELECT
                   c.customer name CUSTOMER, c.customer id,
           s.shopping_cart_id, s.book_id,o.date_of_purchase
                 customer c
           JOIN order details o
                o.customer_id=c.customer_id
ANG LIU (gangl@baylorhealth edu) has a non-transferable license this Student
           JOIN shopping cart s
```
